

Medline.com – Display Settings

The new Medline.com is designed to show you more information on your computer screen to help you quickly view order information, find our products, and to simplify the ordering process. The recommended screen resolution should be set to 1024 by 768. The site is usable at lesser screen resolutions, but you'll have to utilize the scroll bars to display all the information on your screen.

Setting your screen resolution to 1024 by 768

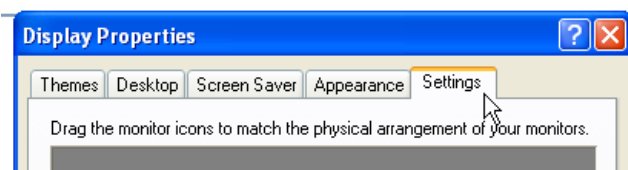

This document was created using Microsoft Windows XP Professional. If your operating system is different, you can still use this document although the screen shots may be a little different. To set your screen resolution to 1024 by 768, follow these easy steps:

- 1) Launch the *Control Panel* by selecting Start>Control Panel. (Other Windows versions may require you to select Start>Settings>Control Panel)

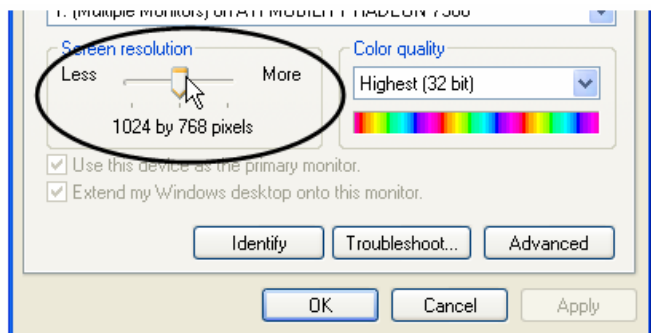

Display in the

- 2) Select the *Display* icon
- 3) Select the Settings tab

- 4) Move the slider to change the setting to **1024 by 768 pixels**

- 5) Click the OK  button

- 6) A confirmation window may be displayed asking you to confirm the changes. Click to accept the changes.

- 7) That's it! You'll notice that more space is being displayed on your screen. Not only will the new Medline.com be displayed in its recommended screen resolution, but all your programs will be displayed with the new available space.
