

✦ BEING GOOD TO THE GOOD EARTH.

Traditional manufacture of fabrics made with virgin polyester is tough on the environment. It can release heavy metals into water systems, have toxic impact on fish, algae, and water life, and degrade the ecosystem.

**ECO INTELLIGENCE:[®]
AT ONE WITH NATURE.**

Eco Intelligent[®] Polyester is designed at a molecular level to be recycled in perpetuity, without a downgrade in quality. That makes it a "technical nutrient," a renewable resource in a "closed loop" of sustainable use. It adheres to strict Cradle to Cradle[™] Gold criteria, attaining the highest possible water, energy, and social responsibility standards.

It uses optimized dyes and is non-toxic to make and recycle. In short, it's made with sustainable environmental practices. That helps make the world a healthier place. ✦
