

Sterillium® Rub

Surgical Rub Method

Apply to clean dry hands. For the first use of the day, use a nailpick. Application process should take approximately 2 minutes. Hands should remain moist for entire application time.

Step 1

Dispense Sterillium Rub into palm (minimum of 1.2 mL). Dip fingers of opposite hand into palm, working Sterillium Rub under nails and into cuticles; spread on palm, fingers and back of hand. Repeat with opposite hand.

Step 2

Dispense Sterillium Rub (minimum of 1.2 mL) into palm, and spread onto forearm. Repeat application to opposite forearm.

Step 3

Dispense Sterillium Rub (minimum of 1.2 mL) into hands, paying particular attention to fingers, cuticles and interdigital spaces.

Rub hands until dry.
