## Reusable Isolation Gowns

**Easy on the budget and the environment**

Although single-use disposable isolation gowns seem to be the norm, many hospitals are realizing reusable gowns present an easy way to save money and reduce waste. Reusable isolation gowns can reduce costs as much as 25 to 50 percent and reduce medical waste as much as 80 percent. In addition, because disposable, single-use isolation gowns are 25 to 50 percent more than the cost to lease a reusable gown, hospitals can realize significant savings through a reusable program. This does not take into account the annual disposal costs and environmental impact of six million disposable isolation gowns.

Reusable isolation gowns have come a long way, and new technology incorporates polyester microfibers into a tightly woven, fluid-repellent fabric made of continuous filament threads. Gowns manufactured today provide several levels of protection, comfort, flexibility, strength, and durability, plus they are low-linting. Similarly, modern laundering techniques save water, thanks to heat reclamation and other innovative solutions to return energy to washers, dryers and ironers.

Medline’s full line of generously sized reusable isolation gowns are available in synthetic, fluid-resistant fabric or polyester/cotton blends. They meet industry standards for appropriate protection against blood borne pathogens, bodily fluids and other potentially infectious substances.

Fluid Resistant Static Dissipation

A high-count, densely woven fabric made with non-linting continuous filament polyester fibers that offer excellent fluid resistance. This fabric is also engineered with carbon fibers to offer protection where static control is required. Following recommended care instructions, Blockade's barrier properties are guaranteed up to 75 processings.
