ENCORE®
Powder-Free Latex Surgical Gloves

Ansell
Everything you touch...we touch.
Encore® Powder-Free Latex Surgical Gloves

At Ansell, we understand how much responsibility rests in your hands. That’s why we work hard to develop innovative surgical gloves like our powder-free and latex Encore® line. The Encore® family includes a glove for every need and provides the superior barrier protection of latex while decreasing the risk associated with powder. All our Encore® family gloves provide the following:

Safety and Protection

Infection Control

Viral Penetration. Although not required by the FDA, Ansell’s premium line of surgical gloves is tested to ensure protection against viral permeation. The Encore® family of gloves has passed the viral penetration requirements according to ASTM F1671.

Cuff Roll-Down. Ansell’s SureFit Technology™ overcomes the “cuff roll-down” typically experienced while wearing impervious surgical gowns designed to prevent fluid penetration. By maintaining the surgical glove securely around the arm, SureFit Technology™ protects the integrity of the sterile field by shielding the gown cuff and ensures the efficacy of the surgical glove as a barrier protection.

Skin Protection

Low Protein Content. All Encore® gloves contain 50μg/g or less of water-extractable protein per gram, to help eliminate powder-related post-operative complications and sensitivities.

Comfort & Fit

Donning

Alcohol Resistant. Ansell’s proprietary polyurethane inner coating will not break down. It is resistant to alcohol-based hand disinfectants and adds another layer of safety between your skin and the latex.

Damp-Hand Donnability. Polymer coating for dry and damp-hand donnability.

Hand Fatigue

Shape of Glove/Former. Designed with Anatomic Curved Formers for a more natural fit and less fatigue. Ansell’s exclusive formers are the result of a staff dedicated to the development and continuous improvement of formers.

Stretchability (Modulus). Because these gloves are latex, wearers experience a more secure fit that provides greater comfort without tightness.

Tactility Sensitivity

Dependability. Encore® gloves provide different balances of thickness, protection and sensitivity which cater to the complex needs of a diverse range of surgical procedures.

Grip

Application Driven. Each glove in the Encore® line has a unique finish that is application driven for superior gripping capacity.

In addition to the overall benefits that Ansell Surgical gloves offer, each glove in the Encore® Family provides unique features for specific needs.

### Ideal for General Surgery—Textured

**Encore®**

**Addresses Powder-Related Problems**

- Textured finish for reliable grip
- Recommended for the majority of procedures
- Produced on ergonomically designed formers to enhance comfort and fit

**Unique features:**

- Anti-slip smooth finish
- Recommended for the majority of procedures
- Produced on ergonomically designed formers to enhance comfort and fit

### Ideal for General Surgery—Smooth

**Encore® Acclaim®**

**Unique features:**

- Anti-slip smooth finish
- Recommended for the majority of procedures
- Produced on ergonomically designed formers to enhance comfort and fit

### Ideal for Hydrating Technology

**Encore® HydraSoft®**

**Unique features:**

- Anti-slip smooth finish
- Recommended for the majority of procedures
- Produced on ergonomically designed formers to enhance comfort and fit

### Ideal for Delicate Procedures

**Encore® MicroOptic®**

**Unique features:**

- Anti-slip smooth finish
- Recommended for times when there is a need for more sensitivity to very low levels of tactile feedback
- Produced on ergonomically designed formers to enhance comfort and fit
- Micro-thickness allows for comfortable double-gloving

### Extra Protection without the Powder

When we designed our Encore® Orthopaedic gloves, we made sure they provided the added strength and thickness for tear and puncture resistance that’s vital to withstanding the rigors of high-risk, trauma and reconstructive procedures.

**Unique features:**

- Textured finish offers superior grip for handling instruments, sutures and situations when the application of high pressure is needed
- 30% thicker than our standard powder-free glove
- Recommended when there is a need for extra protection and puncture resistance

---

*Caution: Safe use of these gloves by latex-sensitized individuals has not been established.*
