Advanced Wound Care Catalog | 2017
Seeing Things Differently
Medline has a long history of rapid innovation in wound care with no intention of slowing down. The challenges you face in managing chronic wounds drive us to develop new solutions, positively affecting the quality and efficiency of care.

Effective managing chronic wounds requires you to look at things differently and challenge the status quo. Medline’s mission is to help you rise to the challenge by offering the broadest range of advanced wound care products in the industry and delivering a comprehensive package of educational resources. This approach ensures your facility has the tools and expertise to tackle difficult-to-heal chronic wounds.

Medline’s Latest Innovations
» PluroGel® concentrated surfactant (Micelle Matrix™) technology
» Hyalomatrix® hyaluronic acid-based wound device
» TheraHoney® honey wound dressings
» Opticell® with Chytoform technology
» Optifoam® Gentle Post-op with Smart Stretch™ technology
EMPOWERING CLINICIANS THROUGH CUSTOMIZED SUPPORT.

Medline’s educational resources provide you with the support to raise the standard of care. As our valued customer, we invite you to review the resources available with your Medline representative to develop a unique support plan tailored to your needs.

» Advanced Wound & Skin Care Product Specialists
   Medline product specialists are trained to help you optimally leverage the support Medline offers as you strive to enhance quality of care.

» Educational Packaging
   Medline’s award-winning educational packaging ensures that caregivers have complete step-by-step instructions for use at their fingertips.

» Medline University
   Medline University empowers you to take, assign, and track progress on free online courses designed to enhance expertise.

» Skintegrity Program
   A premium suite of products, educational resources and support tools that assist you in tracking outcomes and measuring improvement.

» Educare Hotline
   The Educare hotline allows access to a board-certified wound care nurse from 8am–5pm Central Standard Time Monday–Friday. 1-888-701-SKIN (7546)

» The NE1 Wound Assessment Tool
   This proprietary wound assessment tool is designed to dramatically increase accuracy, consistency and transparency in wound assessment.

» WoundRounds® Wound Management System
   This unique wound management system allows long-term care facilities to streamline and enhance their wound care processes.

» Wound & Skin Care Guidelines
   Medline offers clinical support in helping you determine and communicate your treatment guidelines.

» Online Product Application Videos
   A complete library of instructional application videos helps train new staff on proper product application. Visit: www.medline.com/awcvideos and see how products are applied.

» Advanced Wound & Skin Care Pocket Reference Guide
   This compact booklet contains a wealth of clinical and product information. Designed to be used by caregivers as a reference tool.
DIMES – FOR SUCCESSFUL CHRONIC WOUND CARE

Wound care professionals face diverse and complex challenges. That’s why Medline offers a wide variety of products and programs that help clinicians deliver world-class care tailored to any given clinical context.

Throughout this catalog, you’ll find evidence-based products*, information and resources, all organized around the DIMES system of wound bed preparation and treatment.

*Contact Medline Industries, Inc. for data related to the products mentioned herein.
Support Products, Services and Education
Complementary products to enhance outcomes and round out your wound healing toolkit.

Debridement (Autolytic)
The removal of nonviable tissue by creating an optimal moist wound environment.

Infection/Inflammation
Addressing bioburden and inflammation in the wound.

Moisture Balance
Achieving and maintaining moisture balance in and around the wound.

Edge/Environment
Treating stalled wounds where epithelium fails to migrate.

PluroGel®  8
TheraHoney®  12
TenderWet® Active  14
PluroGel is a unique burn and wound dressing utilizing Micelle Matrix Technology™, a concentrated, cell-friendly surfactant that aids in maintaining an optimal moist wound healing environment. PluroGel helps to protect healthy tissue and soften wound debris.

**PluroGel**

Burn and Wound Dressing

A Unique Approach to Wound Management.

---

**Promoting Patient Comfort**

100% water soluble
PluroGel softens wound debris and allows it to easily rinse off at dressing change, creating a positive dressing change experience.

Gentle, non-irritating formula
Allows for a gentle patient experience.

Better adherence to wounds
PluroGel maintains its consistency, enabling it to remain on the wound bed for better protection.
PluroGel Micelle Matrix

PluroGel’s unique micelle gel matrix maintains moisture in the wound and controls fluid loss, helping to protect healthy tissue and to soften wound debris.

Anatomy of a Micelle

PluroGel’s micelle matrix contains surfactant micelles. A micelle’s hydrophilic surface bonds with water, facilitating movement in the wound environment. Exudate and wound debris is absorbed within the hydrophobic core, allowing for easy removal at dressing change.
**PLUROGEL®**
Burn and Wound Dressing

**RECOMMENDED USES**
- Partial and full-thickness wounds
- First and second degree burns

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- Stratasorb® Composite

**INDICATIONS**
- Light to moderately draining wounds

**CHANGE FREQUENCY**
- PluroGel should be changed daily or as needed or directed by a physician to keep wound moist.

**ABOUT PLUROGEL**
- 100% water-soluble, bio-compatible, cell-friendly
- Softer wound debris rinses off more easily at dressing change
- Helps to create and maintain a moist microenvironment
- Remains on the wound bed for better protection
ORDERING INFORMATION
To order by the dressing, add “H” to the end of the item number.

**THERAHONEY®**
100% Medical-Grade Manuka Honey

**RECOMMENDED USE**
- All wound depths
- All drainage levels
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- OptiLock®
- Qwick™

**INDICATIONS**
- Partial- and full-thickness wounds
- Leg ulcers
- Pressure injuries
- First- and second-degree burns
- Diabetic foot ulcers
- Surgical and trauma wounds
- Minor abrasions, lacerations, and cuts
- Minor scalds and burns

**CHANGE FREQUENCY**
- TheraHoney may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns
- Individuals with a known sensitivity to honey or bee venom

**ABOUT THERAHONEY**
- Made of 100% medical-grade honey (*Leptospermum scoparium*)
- Promotes autolytic debridement via high sugar levels (87%)²,³,⁴
- Helps rapidly reduce odor²,⁴
- Creates a moist wound-healing environment⁴
- Should be paired with an absorbent dressing⁵
- Compatible with silver dressings and wound cleanser surfactants⁶

**DID YOU KNOW?**
TheraHoney draws fluid from the wound bed, encouraging autolytic debridement. Use Qwick in conjunction with TheraHoney for optimal absorbency. For more information on Qwick, see pg. 46.

TENDERWET® ACTIVE
Polyacrylate Gel Pad

RECOMMENDED USE
» All wound depths
» All drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Bordered gauze
» Stratasorb® Composite

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Diabetic ulcers
» Surgical wounds

CHANGE FREQUENCY
» TenderWet Active may be left in place for up to 24 hours
» Change frequency will depend on the amount of drainage

CONTRAINDICATIONS
» Do not apply topical medication or disinfectant during treatment of TenderWet Active

ABOUT TENDERWET ACTIVE
» Solution is released as exudate is absorbed, providing an autolytic debriding process
» Absorbs and retains microorganisms
» Uses physiologically-compatible Ringer’s solution
» More effective than wet gauze therapy
» Will not stick to wound bed, which helps ease the pain of dressing changes
» Cost-effective
» Helps create an ideal moist healing environment
» High fluid retention
» Easy application and removal

TenderWet provides a moist wound environment to help promote autolytic debridement of necrotic tissue.
Potentially harmful microorganisms contaminate nearly all wounds. Actively managing bioburden and infection risk is key to effective wound management.

Opticell® Ag+ 18
Maxorb® Extra Ag+ 22
Optifoam® Gentle Ag+ 24
Optifoam® Ag+ 26
Optifoam® Ag+
Post-Op Strip 28
SilvaSorb® 30
Arglaes® Powder 32
Opticell Ag+ utilizes Chytoform™, Medline’s chitosan-based gelling fiber technology, to deliver excellent benefits to wounds. Opticell Ag+ is highly absorbent and can be moistened to address dry or lightly draining wounds.

Opticell Ag+ delivers broad spectrum antibacterial efficacy without harming skin cells (noncytotoxic).
AN OPTIMAL HEALING ENVIRONMENT.

Opticell Ag+ is highly conformable and retains its shape and size in the wound better than other gelling fibers. This quality ensures that Opticell Ag+ remains in optimal and complete contact with the wound even as it absorbs moisture.

Opticell with Chytoform technology

Competition (Stitched Gelling Fiber)

The smooth, thin and conformable profile provides for intimate contact with the wound.

The ridges in the dressing may lead to an uneven wound contact surface.

ABSORPTION STUDY RESULTS1

Opticell’s exceptional absorption capacity helps reduce dressing change frequency and limit maceration.

Average Fluid Absorbed (g/100cm²)

Based on in vitro testing, Opticell had the highest average absorbency of the three dressings tested.

References

Opticell Ag+ has been shown to effectively kill microorganisms for up to 7 days, including:

- Methicillin-resistant *Staphylococcus aureus* (MRSA) ATCC 33591—gram positive bacteria
- *Escherichia coli* ATCC 8739—gram negative bacteria
- *Pseudomonas aeruginosa* ATCC 9027—gram negative bacteria
- *Candida albicans* ATCC 10231—yeast
- Vancomycin-resistant *Enterococcus faecium* (VRE) ATCC 51575—gram positive bacteria
- *Staphylococcus aureus* ATCC 6538—gram positive bacteria

References
The gelling action enables effective management of drainage and removal of dead tissue. When moistened with fluids and exudate, the absorbent fibers transform into a gel.

After harvesting the donor skin, Opticell is placed over the donor site.

**What’s Inside?**
Chytoform is the chitosan-based gelling fiber technology inside Opticell. Chitosan is derived from shellfish, bringing the science of the ocean to wound care.
MAXORB® EXTRA Ag+
Antimicrobial CMC/Calcium Alginate Dressings

RECOMMENDED USE
» All wound depths
» Moderate to heavy drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» Stratasorb® Composite
» Bordered gauze

INDICATIONS
» Pressure injuries
» Leg ulcers
» First- and second-degree burns
» Moderate to heavily draining partial- and full-thickness wounds
» Diabetic foot ulcers
» Surgical wounds
» Graft and donor sites
» Trauma wounds

CHANGE FREQUENCY
» Maxorb Extra Ag+ may be left in place for up to 21 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Dry or lightly draining wounds
» Patients with a known sensitivity to alginate or silver
» To control heavy bleeding
» As a surgical implant

ABOUT MAXORB Ag+
» Helps manage bacterial burden
» Controlled-release ionic silver
» Easy dressing changes
» Highly absorbent
» Reduces odor
» Fluid will not wick laterally
» Up to 21-day antimicrobial protection
» Reinforced silver CMC/alginate ribbon
» Ribbon is ideal for tunneling or undermining wounds
» Cost-effective

MODIFIED ASEPSIS INDEX
As a measure of 10 wound healing parameters. A lower score is preferable.

OPTIFOAM® GENTLE Ag+ 
Antimicrobial Silicone Foam Dressings

RECOMMENDED USE
» All wound depths*
» All wound drainage levels
» As a primary or secondary dressing

RECOMMENDED SECONDARY DRESSINGS**
» Gentac™ tape
» Elastic net
» Medigrip™ Tubular Bandage

*May be used as a secondary dressing for deep wounds
**Only non-bordered dressings require a secondary dressing

INDICATIONS
» Pressure injuries
» Partial- and shallow full-thickness wounds
» Surgical wounds
» Wounds with colonization
» Leg ulcers
» Diabetic foot ulcers
» Donor sites
» Lacerations and abrasions
» Skin tears
» First- and second-degree burns

CHANGE FREQUENCY
» Optifoam Gentle Ag+ may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Lesions with active vasculitis
» Individuals with a known sensitivity to silver

ABOUT OPTIFOAM GENTLE Ag+
» Silicone dressing provides gentle adhesion
» Highly conformable
» Moisture vapor transmission rate (MVTR) adjusts to fluid level
» Ionic silver provides an antimicrobial barrier
» Continuous antimicrobial barrier protection
» Helps maintain a moist wound-healing environment
» Waterproof outer layer
» Highly absorbent
» Non-staining
» Low friction and shear outer layer

SILVASORB®
Antimicrobial Hydrogel Dressings

RECOMMENDED USE
» All wound depths
» Light to moderately draining wounds
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Stratasorb® Composite
» Bordered gauze
» Optifoam® Gentle

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Diabetic foot ulcers
» Graft wounds and donor sites

» Skin tears
» Surgical wounds
» Lacerations and abrasions
» First- and second-degree burns

CHANGE FREQUENCY
» Amorphous gel may be left in place for up to 3 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Individuals with a known sensitivity to silver

ABOUT SILVASORB
» Helps manage bacterial burden¹,²
» Ionic silver
» Continuous antimicrobial protection¹,³
» Non-staining¹
» Gentle for the patient⁴,⁵
» Advanced fluid management¹
» Extended wear time³,⁶,⁷

SURVIVAL CURVE WITH SILVASORB¹
SilvaSorb has powerful antimicrobial activity (in vitro), 6–8 log reduction within four hours.
Pressure Ulcer Case Study

A 93 year-old wheelchair-bound male with no significant nutritional deficits developed a chronic trochanteric pressure ulcer. The ulcer was treated with various wound care therapies for four months without progress. The wound bed was friable and therefore presumptive for high bioburden. It was elected to start an antimicrobial dressing in conjunction with off-loading the affected hip. Closure was attained within four weeks.

Before After 4 weeks

Source: Mary Nametka, RN, MSN, CS, CWS, CWCN, Adventist Medical Center, Portland OR, Study Site Avamere LTC Facility, Portland OR. Presented at the Annual Symposium on Advanced Wound Care, April 27-29, 2002

ARGLAES® POWDER
Antimicrobial Powder

RECOMMENDED USE
» All wound depths
» Light to heavily draining wounds
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Stratasorb® Composite
» Bordered gauze
» Suresite® 123+Pad

INDICATIONS
» Pressure injuries
» Diabetic foot ulcers
» Partial- and full-thickness wounds
» Leg ulcers
» Negative pressure wound therapy
» Grafted wounds
» Donor sites
» Lacerations and abrasions
» First- and second-degree burns

CHANGE FREQUENCY
» Arglaes Powder may be left in place for up to 5 days
» Dressing change frequency will depend upon the amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Patients with a known sensitivity to silver
» As a surgical implant
» Do not use topical antibiotics in conjunction with Arglaes

ABOUT ARGLAES POWDER
» Manages bacterial burden
» Continuous antimicrobial protection
» Extended wear time
» Non-staining
» Can convert other dressings to aid in an antimicrobial reduction

SUSTAINED-RELEASE³

Greater than 90% reduction in viable bacterial numbers after 48 hours.

Powerful antimicrobial activity – up to a 6 log reduction (in vitro studies)

References
1. Internal report on file.
Achieving the right moisture balance can be a challenge. Too much moisture can lead to periwound maceration and skin breakdown, while too little moisture can impede cellular activities and promote eschar formation, resulting in poor wound healing.

ABSORBENT AND MOISTURE-DONATING PRODUCTS HELP ENSURE AN OPTIMAL WOUND-HEALING ENVIRONMENT.

CHOOSE GENTLE.

Optifoam Gentle helps ease the pain and trauma of dressing changes. Featuring a specially-formulated silicone adhesive that helps keep it in place, Optifoam’s absorbent core absorbs and retains fluid, protects against infection*, and helps prevent shear and friction.

» Waterproof film acts as a bacterial barrier
» Foam and superabsorbent core absorb and retain exudate
» Silicone adhesive minimizes trauma and reduces pain upon wear or removal

*available on Ag dressings only
FOAM DRESSINGS HELP REDUCE HOSPITAL ACQUIRED PRESSURE ULCERS (HAPU).

Studies in the evaluation of the use of a foam dressing with silicone border on patients at risk for HAPU resulted in a significant reduction in pressure ulcers over a 3-month period with lower monthly incidence and enhanced prevention.¹

**OPTIFOAM® GENTLE**

**Foam Dressings**

**RECOMMENDED USE**
- All wound depths*
- All wound drainage levels
- As a primary or secondary dressing

*May be used as a secondary dressing for deep wounds

**RECOMMENDED SECONDARY DRESSINGS†**
- Gentac Tape
- Elastic net
- Medigrip Tubular Bandage

†Applies to Optifoam Silicone Faced Foam only

**INDICATIONS**
- Pressure injuries
- Partial- and full-thickness wounds
- Leg ulcers
- Donor sites
- Lacerations and abrasions
- Skin tears
- First- and second-degree burns

**CHANGE FREQUENCY**
- Optifoam Gentle may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns

**ABOUT OPTIFOAM GENTLE**
- Silicone adhesive provides gentle adhesion
- Highly conformable dressing can be lifted and reapplied
- Moisture vapor transmission rate (MVTR) adjusts to fluid level
- Highly absorbent
- Helps create ideal healing environment
- Waterproof outer layer protects wound and keeps bacteria out
- Low friction and shear outer layer

**OPTICELL®**
Chitosan-Based Gelling Fiber

**RECOMMENDED USE**
- All wound depths
- All drainage levels
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- Bordered gauze
- Stratasorb® Composite

**INDICATIONS**
- Partial- and full-thickness wounds
- Venous stasis ulcers
- Pressure injuries
- First- and second-degree burns
- Diabetic foot ulcers
- Surgical wounds

- Trauma wounds
- Donor sites
- Arterial ulcers and leg ulcers of mixed etiology
- Oncology wounds

**CHANGE FREQUENCY**
- Opticell® may be left in place for up to 7 days
- Opticell may remain in place up to 14 days in the context of burn treatment
- Dressing change frequency will depend on the amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns
- Individuals with a sensitivity to chitosan, which is derived from shellfish

**SURFACE AREA MEMORY (SAM) RESULTS**
Retains its shape and size to maintain complete wound coverage.

**ABOUT OPTICELL**

- Chytoform™ gelling fiber technology
- Controls minor bleeding
- Highly conformable
- Versatile – can be used for all drainage levels
- Three times as strong as traditional Aquacel®
- No lateral wicking – limits maceration
- Highly absorbent
- Maintains a moist wound-healing environment
- Surface area memory (SAM) – retains its size
- Gentle removal from the wound
- Designed to minimize pain upon removal

**ABOUT OPTICELL®**

Chitosan-based Conformable Gelling Fiber Technology

ABSORPTION STUDY RESULTS
Opticell delivers best-in-class absorption capabilities.¹

References
1. Lab testing data on file.
**QWICK™**
Superabsorbent Dressings

**RECOMMENDED USE**
- All wound depths
- Moderate to heavy drainage
- As a primary dressing

**INDICATIONS**
- Pressure injuries
- Partial- and full-thickness wounds
- Leg ulcers
- Lacerations and abrasions
- Wounds under compression

**RECOMMENDED SECONDARY DRESSINGS**
- Bordered gauze
- Optifoam Gentle
- Elastic net

**CHANGE FREQUENCY**
- Qwick may be left in place for up to 7 days
- Dressing change frequency will depend on the amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns

**ABOUT QWICK**
- Multilayer construction wicks and retains fluid to help protect the skin from maceration
- Can be cut to fit
- Flexible
- Superabsorbent
- Wicking
- Featuring Aquaconductive™ Technology
Aquaconductive Technology
Aquaconductive Technology is the mechanism by which the three layers of Qwick wound dressing pull exudate away from or out of the wound to help create an optimal moist wound-healing environment.

ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

QWICK SUPERABSORBENT AQUACONDUCTIVE™ DRESSING
Superabsorbent conformable dressing with Aquaconductive™ technology

Moisture Balance

The blue layer is the top layer, which faces away from the wound and helps serve as an indicator of how the dressing should be applied. This layer is not occlusive, and exudate can pass through it into a secondary dressing.

The storage layer consists of superabsorbent polyacrylate fibers designed to absorb and retain large amounts of exudate.

The wound contact layer is composed of a blend of hydrophobic and hydrophilic fibers. Hydrophilic fibers attract the exudate, resulting in fast wicking. Hydrophobic fibers regulate and channel absorption to facilitate vertical transfer of the exudate from the wound into the storage layer of Qwick.
**OPTILOCK®**
Superabsorbent Dressings

**RECOMMENDED USE**
» All wound depths*
» Moderate to heavy drainage
» As a primary dressing

*(As a secondary dressing for deep wounds

**RECOMMENDED SECONDARY DRESSINGS**
» Medfix™ Tape
» Elastic net
» Gentac® Tape
» CoFlex® TLC Two Layer Compression System

**INDICATIONS**
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Lacerations and abrasions
» Wounds under compression

**CHANGE FREQUENCY**
» OptiLock may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
» Third-degree burns
» Individuals with a known sensitivity to the product itself or its components

**ABOUT OPTILOCK**
» Superabsorbent polymer core
» Locks in drainage under compression
» Adjusts absorption to the amount of drainage
» Protects skin from maceration
» Non-adherent wound contact layer

**DID YOU KNOW?**
OptiLock is ideal for highly draining venous leg ulcers because of its gentle contact layer and fluid-locking feature. Even under high compression bandages, the fluid is retained in the dressing. Use OptiLock in conjunction with CoFlex TLC compression bandage system. To learn more, see pg. 72.
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

OptiLock Absorbs and Retains More Fluid
In manufacturer’s laboratory testing, Medline’s OptiLock dressings outperformed a leading silicone-faced foam dressing. OptiLock’s remarkable absorption and fluid retention capabilities raise the bar for gentle wound care.

Absorption Capacity Under Compression\(^1\)

OptiLock absorbs approximately three times more fluid than a leading silicone-faced foam dressing.

Fluid Loss Under Compression\(^1\)

OptiLock dressings retain substantially more fluid under compression than a leading silicone-faced foam dressing.

MAXORB®
Alginates

RECOMMENDED USE
» All wound depths
» Moderate/heavy drainage
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» Bordered gauze
» Stratasorb® Composite

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Diabetic ulcers
» Surgical wounds
» Donor sites
» Lacerations and abrasions
» First- and second-degree burns

CHANGE FREQUENCY
» May be left in place for up to 7 days
» Dressing change frequency will depend on the amount of drainage

CONTRAINDICATIONS
» Individuals with a known sensitivity to alginates
» Third-degree burns
» To control heavy bleeding
» As a surgical sponge
» Dry or lightly draining wounds

ABOUT MAXORB
» Maxorb II is a 100% alginate dressing
» Maxorb Extra is a blend of CMC and alginate fibers
» Maxorb ES is reinforced for easy removal from tunneling wounds
» Superior fluid handling
» High wet strength—removes in one piece
» Fluid does not wick laterally
» Improved gelling capability

If the wound edge is not migrating after appropriate wound bed preparation (debridement, infection/inflammation, moisture balance) and healing is stalled, then advanced therapies should be considered.

**BIOLOGICALLY-DERIVED PRODUCTS FEATURE A SCAFFOLD WHERE NATIVE CELLS CAN PROLIFERATE AND ULTIMATELY REBUILD TISSUE.**
HYALOMATRIX®
Esterified Hyaluronic Acid Matrix

ACTIVATE HEALING NATURALLY.

Inspired by the remarkable wound healing properties of hyaluronic acid (HA) in the fetal environment, Hyalomatrix features a uniquely long-lasting form of HA called HYAFF. Through a process called esterification, HYAFF takes the normal 3-day wear time of natural HA and extends it to 14–21 days on average.

Along with HYAFF providing a scaffold for native wound healing cells, the HA provides both hydrodynamic and biological effects. These aid in cellular migration, capillary growth, dermal reconstruction, and spontaneous reepithelialization1.
WELL-ESTABLISHED. WELL-DOCUMENTED.

The roles of HA, HYAFF and Hyalomatrix are supported by more than 800 peer-reviewed published papers.²

750+ exploratory research studies on HA

45 HYAFF technology studies

28 Hyalomatrix clinical studies

Verification Services Available!

Outpatient reimbursement can be extremely complex. Medline offers patient benefit verification and prior authorization services to help providers and, in turn, their patients. If you have questions about Medline’s verification services or Hyalomatrix reimbursement eligibility, just call 1-888-817-9015 or email Hyalomatrix@medline.com.
HYALOMATRIX®
Esterified Hyaluronic Acid Matrix

RECOMMENDED WOUND CONDITIONS
» All wound depths
» All drainage levels
» Primary layer

RECOMMENDED SECONDARY DRESSINGS
» Versatel®
» Qwick™
» OptiLock®
» Sterile adhesive strips

INDICATIONS
» Pressure, venous, diabetic ulcers
» Partial- and full-thickness wounds
» Chronic vascular ulcers
» Second-degree burns
» Tunneled/undermined wounds
» Surgical wounds (donor sites/grafts, post-Mohs surgery, post-laser surgery, podiatric, wound dehiscence)
» Trauma wounds (abrasions, lacerations, second-degree burns, skin tears)
» Draining wounds

CHANGE FREQUENCY
» Removal of the silicone layer is recommended when the tissue underneath is healed, or ready for grafting, typically 14 to 21 days after application

CONTRAINDICATIONS
» Individuals with a hypersensitivity to hyaluronan and/or its derivatives and silicone

ABOUT HYALOMATRIX
» Primary layer comprised entirely of HYAFF®, esterified hyaluronic acid
» Acts as a scaffold for cellular colonization and capillary growth
» Facilitates ordered reconstruction of the dermal tissue
» Semipermeable silicone membrane controls water vapor loss
» Can be used in combination with negative pressure wound therapy (NPWT)

DID YOU KNOW?
Hyalomatrix can occasionally emit odor as it incorporates into the underlying tissue of the wound bed. To help reduce odor, irrigate with a high-performance wound cleanser like Prophase. To learn more, see pg. 91.

OR debridement of devitalized tissue due to necrotizing fasciitis and subsequent Hyalomatrix application

22 days post Hyalomatrix removal—Granulation coverage with complete coverage of tendon and some spontaneous reepithelialization.
**PURACOL®**
**Collagen Dressings**

**RECOMMENDED WOUND CONDITIONS**
- All wound depths
- All drainage levels
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- Stratasorb® Composite
- Bordered gauze
- Optifoam® Adhesive

**INDICATIONS**
- Pressure, venous, diabetic ulcers
- Partial- and full-thickness wounds
- Ulcers caused by mixed vascular etiologies
- Donor sites and other surface wounds
- Abrasions
- Traumatic wounds healing by secondary intention
- Dehisced surgical wounds

**CHANGE FREQUENCY**
- Puracol Plus and Puracol Plus Ag+ may be left in place for up to 7 days or replaced at the discretion of a healthcare professional
- Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
- Active vasculitis or patients with known sensitivity to collagen
- Puracol Plus Ag+ only: patients with known sensitivity to silver;
- Third-degree burns

**MEASUREMENT OF COLLAGEN NATIVITY**

**PURACOL PLUS**

> *Proportional to the extent of nativity, higher nativity is desirable*.

**ABOUT PURACOL PLUS**
- 100% collagen with a high degree of nativity
- High gel integrity
- Helps promote a natural wound environment conducive to wound healing
- Biodegradable
- Can be used in combination with negative pressure wound therapy (NPWT)

**ABOUT PURACOL ULTRA POWDER**
- Maintains a high degree of nativity
- Increases the surface area in contact with the wound site
- Conforms to irregular shaped wound sites

**ABOUT PURACOL PLUS Ag+**
- In addition to all the benefits of Puracol Plus:
  - Ionic silver provides antimicrobial barrier
  - Non-staining

MARATHON®
No-Sting Cyanoacrylate Skin Protectant

INNOVATING SKIN PROTECTION WITH CYANOACRYLATE TECHNOLOGY

Marathon No-Sting Cyanoacrylate Skin Protectant provides a long-lasting, robust barrier that defends damaged or intact skin from breakdown caused by moisture, friction, shear, and adhesive stripping.

This technology bonds to the skin through the polymerization process, becoming an additional layer of skin that will wear off as the epidermis naturally renews.
TESTED AND PROVEN.

An independent study tested 12 subjects ages 60+ and compared how bare skin, skin with an application of Marathon, and skin with an application of Cavilon resisted exposure to a corrosive fluid (synthetic urine).

RESULTS:
Areas where Marathon was applied showed better resistance after each of the five urine and wash-off cycles compared to the areas where Cavilon or no product at all were applied.

"Today was a teary moment when Marathon worked for my patient that uses duct tape. She no longer needs duct tape for her ostomy. Marathon is holding strong, and she is elated."
—Carrie Dean RN, CWCN

MARATHON®
No-Sting Cyanoacrylate Skin Protectant

RECOMMENDED USES
» Protection from moisture-associated skin damage
» Protection from friction and shear
» Protection from adhesive trauma

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
Protects intact or damaged skin from:
» Body fluids
» Moisture
» Friction and shear
» Adhesive stripping

CHANGE FREQUENCY
» Up to 3 days, reapply as needed

CONTRAINDICATIONS
Do not apply directly to:
» Deep, open, bleeding, or chronic wounds
» Second- or third-degree burns
» Infected areas

ABOUT MARATHON
» Robust, flexible and long-lasting
» Non-stinging; contains no solvents or activators
» Protects from the effects of friction and shear
» Protects from moisture-associated skin damage caused by urine, exudate, perspiration, and other body fluids
» Can be used on intact or damaged skin
» Fast drying
» Breathable

CYANOACRYLATE-BASED BARRIER
A >20 μm layer of cyanoacrylate-based barrier can be clearly seen at x200 magnification. There are NO visible gaps between the skin and Marathon, since it bonded directly to the skin.³

SOLVENT-BASED BARRIER
The approximate <5 μm layer of a solvent-based barrier at x200 magnification is seen in this image. The gap between the skin and the solvent-based barrier is visible.³

DID YOU KNOW?

Marathon provides robust, breathable protection which facilitates wound closure. Use Marathon in conjunction with Opticell Ag+ to treat or prevent maceration of the periwound. To learn more, see pg. 18.
On day 4 and day 5, subjects using Sureprep No-Sting experienced significantly less water loss than subjects using 3M Cavilon No-Sting.

DID YOU KNOW?
TheraHoney gel promotes autolytic debridement, which can increase drainage. To protect the periwound from maceration use Sureprep Rapid dry. To learn more, see pg. 12.

References:
The CoFlex TLC compression system manages venous insufficiency and associated edema by delivering 30–40 mmHg* of compression for up to 7 days. The first layer is soft, absorbent foam, specially designed to wick away moisture and control odor. The second layer is a short stretch cohesive bandage that provides therapeutic compression levels and holds the first layer in place.

*Source: Andover Healthcare Study #1306-A. Data on file. Actual compression delivered will partially depend on limb circumference and application technique, and therefore vary between patients.
WHAT’S INSIDE

» Absorbent padding bandage – with odor control.
» Cohesive compression bandage – tears by hand for easier application.
» Knee-high stocking – helps patients comply with compression therapy; comfortable and discreet under clothing and shoes.
» Extra-large bandage – CoFlex TLC XL offers bandage rolls that are 35% longer.
» Patient education card – explains compression therapy and encourages patients to follow the healthcare provider’s instructions.
» Medline Educational Packaging™ – easy-to-follow application instructions right on the box.
COFLEX® TLC
Two-Layer Compression System

RECOMMENDED USES
» Venous leg ulcers

RECOMMENDED PRIMARY DRESSINGS
» Qwick
» Opticell Ag+
» OptiLock

INDICATIONS
» To deliver therapeutic compression to manage venous disease and associated edema

CHANGE FREQUENCY
» CoFlex® TLC compression system may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Patients with severe arterial disease

ABOUT COFLEX TLC
» CoFlex TLC provides 30–40mmHg of therapeutic compression
» CoFlex TLC Lite provides 20–30 mmHg of therapeutic compression
» Low-profile system easily fits under clothing and footwear
» Absorbent padding bandage designed to wick away moisture and control odor
» Stocking included to ease movement
» Cohesive layer tears by hand
» Patient information card included in every kit
» Extra-long kit available for larger legs
» Easy and consistent application method

Amount of Water Absorbed\(^1\)

Absorption prior to runoff. Error bars represent the 95% confidence interval. P-value obtained from a one-tailed, paired t-test.

**MEDIGRIP™**
Elasticated Tubular Bandages

**RECOMMENDED USES**
- Dressing Retention
- Light compression

**RECOMMENDED PRIMARY DRESSINGS**
- Qwick
- Opticell Ag+
- OptiLock

**INDICATIONS**
- Edema
- Treatment of chronic venous insufficiency
- Dislocations
- Sprains
- As a retention dressing

**CHANGE FREQUENCY**
- Medigrip may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
- None*

**ABOUT MEDIGRIP**
- Provides excellent support for joints
- Easy to apply and reapply
- Wide range of applications
- Good for securing dressings
- Can be used as mild compression when doubled

**Compression Testing of Bandages**
Based on principles contained in BS 6612¹

*For full arm coverage, measure the largest part of the forearm. For full leg or below the knee coverage, measure the widest point of the calf. And, for the hand, measure around metacarpophalangeal joint.

**Low = 5–10 mm Hg (for general edema)  Medium = 10–20 mm Hg (for varicose conditions/post-burn scarring)  High = 20–30 mm Hg (for soft tissue injuries/joint effusions)
UNNA-Z®
Unna Boot Bandages

RECOMMENDED USE
» Venous leg ulcers

RECOMMENDED PRIMARY DRESSINGS
» Qwick
» Opticell Ag+
» OptiLock

CHANGE FREQUENCY
» Unna-Z may be left in place for up to 7 days, depending on drainage

INDICATIONS
» Venous leg ulcers

RECOMMENDED COVERING WRAP
» Compression CoFlex LF2
» Bulkee® Gauze Wrap

CONTRAINDICATIONS
» Patients with a known sensitivity to components (zinc and/or calamine)

ABOUT UNNA-Z
» Improved knitted design
» Maintains a moist healing environment
» Impregnated with zinc oxide
» Items NONUNNA3 and NONUNNA4 contain calamine and zinc oxide
» Provides light compression
» Inner plastic core for easy application

DID YOU KNOW?
Unna boots are usually covered with a cohesive bandage such as CoFlex LF2.

VERSATEL® AND VERSATEL ONE
Contact Layer Dressings

RECOMMENDED USES
» To prevent secondary dressing adhesion to the wound

RECOMMENDED SECONDARY DRESSINGS
» OptiLock®
» Qwick®
» Maxorb® II

INDICATIONS
» Dry to heavily draining abrasions
» Partial- and full-thickness wounds
» Venous ulcers or pressure injuries
» Skin tears

» First- and second-degree burns
» Blisters, cuts and lacerations
» Surgical and trauma wounds

CHANGE FREQUENCY
» Versatel may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Individuals with a known sensitivity to silicone
» Not for surgical implantation

Fluid Transferred Through Versatel
Versatel is designed to allow wound fluid to easily transfer into a secondary dressing.¹

ABOUT VERSATEL
» Silicone-based atraumatic adhesive
» Flexible and pliable to conform to body contours and improve comfort
» Versatel One features one-sided silicone contact for easy handling
» Reduces potential trauma from secondary dressing wound adherence
» Minimizes pain during removal
» Channels allow fluid to easily transfer to an absorbent dressing
» Translucent for easy wound visualization

A typical highly exudating wound drains over 10 mL of fluid per day.² In an in vitro study that simulates the drainage of a wound, Versatel was shown to be an efficient transfer layer for fluid. Versatel allowed an average of 16.2 mL of fluid to pass through during 2.5 hours, which is equal to 155.52 mL per day.³

References
1. Independent laboratory testing. Test reports on file.
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

Easy Application Instructions

**Step 1:** Clean and dry wound and periwound area. Remove Versatel from package. Remove liner from one side of the dressing.

**Step 2:** Place dressing directly on wound and smooth into place. NOTE: Versatel can cover periwound skin or may be cut if necessary.

**Step 3:** Remove second liner if applicable (Versatel only). Cover with an appropriate secondary absorbent dressing such as Qwick. Versatel can be used under compression dressings.
COVER DRESSINGS
Adhesive Island Wound Dressing

RECOMMENDED WOUND CONDITIONS
» All wound depths
» All drainage levels
» Primary dressing
» Secondary dressing

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Incision sites

CHANGE FREQUENCY
» Can be left in place for up to 7 days
» Change the dressing as indicated by the amount of drainage or as frequently as the primary dressing indicates

CONTRAINDICATIONS
» Third-degree burns
» Patients with a known sensitivity to components of the dressing

ABOUT COVER DRESSINGS
» Non-adherent deluxe soaker pad
» Non-woven adhesive border
» Waterproof backing (Stratasorb)
» Water-resistant backing (Bordered Gauze)
» Ideal for incision sites
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

SURESITE®
Transparent Film Dressings

RECOMMENDED WOUND CONDITIONS
» Shallow
» No/minimal drainage
» Primary dressing
» Secondary dressing

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Peripheral and central I.V. lines
» Partial-thickness wounds
» Full-thickness wounds (secondary dressing)

CHANGE FREQUENCY
» Suresite may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Contraindicated as a primary dressing on wounds with moderate to heavy drainage

Lacerations and abrasions
» To help prevent skin breakdown caused by friction to epidermis

ABOUT SURESITE
» Traditional moisture vapor transmission rate (MVTR)
» Conformable
» Does not stick to itself
» Microporous technology
» Permits continuous observation of wound and line sites
» Variety of delivery systems

ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

DRESSING RETENTION TAPE
Non-Woven, Silicone and Zinc Oxide Tape

RECOMMENDED USE
» Dressing retention

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» To secure primary dressings
» To secure gastrostomy tubes and other feeding tubes

CHANGE FREQUENCY
» Dressing change frequency will depend on the primary dressing and amount of drainage

CONTRAINDICATIONS
» Contraindicated as a primary dressing

ABOUT TAPE
» MedFix has a printed s-curve release liner
» MedFix EZ is linerless and perforated
» MedFix tapes are water resistant
» Gentac is transparent
» Gentac uses gentle and repositionable silicone adhesive
» Gentac tape is waterproof
» Pinc Tape is zinc based and adheres well even in moist conditions

PRODUCT SPOTLIGHT
Pinc™ Tape
» Pinc utilizes a zinc oxide adhesive
» Pinc tape is waterproof
» Pinc tape adheres well in moist environments

PRODUCT SPOTLIGHT
Prophase™ Wound Cleanser
» Contains PHMB as a preservative
» Low pH formulation
» Available in convenient 2-oz. squeeze bottle

WOUND CLEANSERS

RECOMMENDED USES
» Cleansing all types of wounds

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
To clean a wide variety of wounds including:
» Pressure injuries
» Partial- and full-thickness wounds
» Infected and non-infected wounds

CHANGE FREQUENCY
» With every dressing change

CONTRAINDICATIONS
» Patients with a known sensitivity to ingredients in the wound cleanser

ABOUT WOUND CLEANSERS
» Easy cleansing
» Adjustable trigger, PSI of 8.6 at 3”
» Within AHCPR guidelines
» MicroKlenz is antimicrobial
» Prophase contains PHMB as a preservative

NE1®
Wound Assessment

RECOMMENDED USES
» Measure and assess all types of wounds

INDICATIONS
» Wound assessment to assist with wound evaluation

CHANGE FREQUENCY
» One time use, during each wound evaluation
» Upon admission and discharge at minimum

CONTRAINDICATIONS
» None

ABOUT NE1
» Easy-to-use color-matching technique
» Reduces errors and promotes accurate wound assessment
» Standardizes wound documentation
» Free online education

The study showed a statistically significant improvement in wound assessment. Overall, the clinicians more than doubled their accuracy with the help of the NE1 Wound Assessment Tool.¹

NE1 Photographic Wound Documentation Guide

This comprehensive documentation form simplifies the assessment and documentation process. A PDF can be found at www.MedlineNE1.com
ACUTE CARE
For more Information, see our Acute Care Support Surfaces Brochure (LIT58R)

THERATECH MATTRESS
Prevention through Treatment of Stage 2 Wounds
Resilient load-bearing cells independently conform to the body to redistribute pressure and reduce shear, while air channels reduce heat and moisture.

EQUALIZEAIRE MATTRESS
Prevention through Treatment of Stage 4 Wounds
The dynamic, self-adjusting non-powered mattress can become an alternating pressure mattress with the addition of the optional pump.

ADVANTAGE O.R. TABLE PAD
Prevention through Treatment of Stage 2 Wounds
Advanced surfaces optimize pressure redistribution during surgery on the O.R. table.

STRETCHER PADS
Prevention through Treatment of Stage 2 Wounds
Advanced surfaces optimize pressure redistribution during transportation to and from the operating room.

HEEL PROTECTION
Prevention through Treatment of Stage 4 Wounds
Innovative devices elevate the heels and significantly reduce pressure, friction and shear.

RECOMMENDED USES
» Pressure redistribution
» Friction reduction
» Shear reduction
» Heat distribution

ABOUT THERAPEUTIC SUPPORT SURFACES
» To provide solutions for the entire continuum of care, Medline offers a full line of pressure redistribution products for acute, long-term, and home care use.
LONG-TERM CARE
For more information, see our Long-Term Care Support Surfaces Brochure (LIT162)

ADVANTAGE CONTOUR MATTRESSES
Prevention through Treatment of Stage 2 Wounds
The unique contour shape of the high-resiliency foam helps it to completely conform to the resident’s body and cradle high-risk areas and provide support.

POWERED MATTRESSES/OVERLAYS
Prevention through Treatment of Stage 4 Wounds
Choose from a wide variety of options for every major therapeutic modality, including alternating pressure, low air loss, true low air loss and self-adjusting therapies.

WHEELCHAIR CUSHIONS
Prevention through Treatment of Stage 4 Wounds
Wide selection of Medline-brand and popular name-brand cushions are specifically designed to meet the needs of residents.

HEEL PROTECTION DEVICES
Prevention through Treatment of Stage 4 Wounds
Medline’s top-quality heel protection devices elevate heels and significantly reduce pressure, friction, and shear.

HME DEALER
For more information, see our HME Dealer Support Surfaces Brochure (LIT459)

GROUP I TREATMENT PRODUCTS
Prevention through Treatment of Stage 2 Wounds
A variety of prevention products are specifically tailored to HME Dealers, including static air overlays, alternating-pressure overlays, gel overlays and therapeutic homecare mattresses.

GROUP 2 TREATMENT PRODUCTS
Treatment of Stages 2 through 4 & Surgical Wounds
A variety of treatment options cater to HME Dealers, including alternating pressure, low air loss, true low air loss and self-adjusting therapies.

WHEELCHAIR CUSHIONS/BEDSIDE SAFETY/ACCESSORIES
Prevention through Treatment of Stage 4 Wounds
A wide selection of Medline-brand and popular name-brand cushions are specifically designed to meet the needs of today’s HME Dealer.
Classification of Tissue Destruction in Pressure Injury

A pressure injury is localized damage to the skin and/or underlying soft tissue usually over a bony prominence or related to a medical or other device. The injury can present as intact skin or an open ulcer and may be painful. The injury occurs as a result of intense and/or prolonged pressure or pressure in combination with shear. The tolerance of soft tissue for pressure and shear may also be affected by microclimate, nutrition, perfusion, co-morbidities and condition of the soft tissue. NPUAP, 2016

**STAGE 1**

**Stage 1 Pressure Injury: Non-blanchable erythema of intact skin**

Intact skin with a localized area of non-blanchable erythema, which may appear differently in darkly pigmented skin. Presence of blanchable erythema or changes in sensation, temperature, or firmness may precede visual changes. Color changes do not include purple or maroon discoloration; these may indicate deep tissue pressure injury.

**STAGE 2**

**Stage 2 Pressure Injury: Partial-thickness skin loss with exposed dermis**

The wound bed is viable, pink or red, moist, and may also present as an intact or ruptured serum-filled blister. Adipose (fat) is not visible and deeper tissues are not visible. Granulation tissue, slough and eschar are not present. These injuries commonly result from adverse microclimate and shear in the skin over the pelvis and shear in the heel. This stage should not be used to describe moisture associated skin damage (MASD) including incontinence associated dermatitis (IAD), intertriginous dermatitis (ITD), medical adhesive related skin injury (MARS), or traumatic wounds (skin tears, burns, abrasions).

**STAGE 3**

**Stage 3 Pressure Injury: Full-thickness skin loss**

Full-thickness loss of skin, in which adipose (fat) is visible in the ulcer and granulation tissue and epibole (rolled wound edges) are often present. Slough and/or eschar may be visible. The depth of tissue damage varies by anatomical location; areas of significant adiposity can develop deep wounds. Undermining and tunneling may occur. Fascia, muscle, tendon, ligament, cartilage and/or bone are not exposed. If slough or eschar obscures the extent of tissue loss this is an Unstageable Pressure Injury.

**STAGE 4**

**Stage 4 Pressure Injury: Full-thickness skin and tissue loss**

Full-thickness skin and tissue loss with exposed or directly palpable fascia, muscle, tendon, ligament, cartilage or bone in the ulcer. Slough and/or eschar may be visible. Epibole (rolled edges), undermining and/or tunneling often occur. Depth varies by anatomical location. If slough or eschar obscures the extent of tissue loss this is an Unstageable Pressure Injury.

**DEEP TISSUE PRESSURE INJURY (DTPI)**

**Deep Tissue Pressure Injury: Persistent non-blanchable deep red, maroon or purple discoloration**

Intact or non-intact skin with localized area of persistent non-blanchable deep red, maroon, purple discoloration or epidermal separation revealing a dark wound bed or blood-filled blister. Pain and temperature change often precede skin color changes. Discoloration may appear differently in darkly pigmented skin. This injury results from intense and/or prolonged pressure and shear forces at the bone-muscle interface. The wound may evolve rapidly to reveal the actual extent of tissue injury, or may resolve without tissue loss. If necrotic tissue, subcutaneous tissue, granulation tissue, fascia, muscle or other underlying structures are visible, this indicates a full-thickness pressure injury (Unstageable, Stage 3 or Stage 4). Do not use DTPI to describe vascular, traumatic, neuropathic, or dermatologic conditions.

**UNSTAGEABLE**

**Unstageable Pressure Injury: Obscured full-thickness skin and tissue loss**

Full-thickness skin and tissue loss in which the extent of tissue damage within the ulcer cannot be confirmed because it is obscured by slough or eschar. If slough or eschar is removed, a Stage 3 or Stage 4 pressure injury will be revealed. Stable eschar (i.e. dry, adherent, intact without erythema or fluctuance) on an ischemic limb or the heel(s) should not be removed.
EDUCARE® HOTLINE MANAGED
BY WOUND CARE NURSE SPECIALIST

An important number to remember is 1-888-701-SKIN (7546) because it reaches our Educare Hotline, managed by board-certified wound care nurses. The nurses are available to answer questions about product usage such as application and appropriateness of a dressing for a particular wound condition.

The Educare Hotline is staffed Monday through Friday from 8 am to 5 pm Central Time.

PRODUCT SUPPORT AT
www.medline.com/advancedwoundcare

Medline’s website is another way to get up-to-date product information. You will find application videos for all of our advanced wound care products at www.medline.com/awcvideos. The interactive product selector can also help you choose the best product based upon the wound conditions.

MORE THAN 80 WOUND AND
SKIN CARE PRODUCT SPECIALISTS

Receiving support from one of Medline’s 80+ wound care product specialists has never been easier. The wound care product specialists are devoted to supplying you with appropriate wound care products, services and educational support. This team is highly trained and available to deliver on-site, face-to-face in-servicing for your staff.

For more information, see www.medline.com/advancedwoundcare or contact your sales specialist.
Many nurses find themselves in situations on a daily basis where valuable time is wasted searching for the right dressing. Often the wrong dressing is used or the dressing is not used properly. By listening to you, Medline has found a way to improve this process and ensure that nurses have the information they need. It is called Educational Packaging. The package focuses on patient safety and correct product application. Each package serves as a 2-Minute Course on Wound Care™.

Often, a dressing’s box and product insert never leaves a supply room or closet. For that reason, Medline leverages Educational Packaging to provide bedside support to the nurse, the patient, and the family. Education is essential for clinicians as well as for their patients and their families. Ensuring that patients and caregivers are taught the expected outcomes and the plan to achieve them is vital for successful wound treatment.
MEDLINE UNIVERSITY®

Medline University offers continuing education programs and accredited continuing nursing education opportunities. We offer a wide array of educational opportunities on topics that are current and relevant to your staff. The courses are presented in an online format so you can take them at your convenience. All you need is a connection to the internet! The course content, test and CE certificate are online. Visit our Web site www.medlineuniversity.com for more information.

» Free access to 250 clinical courses approved for continuing education credit by nationally recognized boards of nursing
» Keep track of all your Medline University CEs and other CEs in one convenient place
» Easy-to-use website, with no app required

And it’s all absolutely FREE!

AWC MEDLINE UNIVERSITY COURSES

» Management and Treatment of Lower Extremity Wound
» 2016 NPUAP Pressure Injury Staging System
» MASDA: Moisture Associated Skin Damage Awareness

**WOUNDROUNDS®**

A powerful system that transforms wound care management across the continuum of care.

WoundRounds integrates handheld technology with Web-based tools for documenting wounds, tracking outcomes and helping caregivers to maintain patients’ skin integrity.

### ABOUT WOUNDROUNDS®

A point-of-care solution, WoundRounds combines the convenience of a handheld device with the efficiency of a Web-based application, where data can be stored and analyzed in a single system. With WoundRounds, you can enable your staff to improve patient care, save on costs by moving to digital data collection and storage, and quickly generate improvement reports.

### HOW DOES IT WORK?

**STEP 1:**
At the patient’s bedside, WoundRounds makes it easy to collect data on the patient’s wound.

» Take photos
» Follow step-by-step prompts through patient assessment
» Document treatment recommendations/utilization

**STEP 2:**
Data collected with the handheld device is uploaded to secure servers. Once uploaded:

» Reports can be generated automatically
» No searching for paper charting
» No incomplete or missing documentation

Nurses enter data once, and it’s done!

Contact your Medline representative to request a demonstration of WoundRounds today!

- **Touchscreen**—As easy to use as a smart phone, and just as portable
- **Built-in camera**—Capturing wound images for reference and documentation
- **Transmitting vital information and images**—To secure servers for easy storage and retrieval
- **Evidence-based prompts**—Guiding nurses, step by step, through assessments and treatments
