**Advancing Wound Healing**

Advanced Wound Care Catalog
Effectively managing chronic wounds requires you to look at things differently and challenge the status quo. Medline’s mission is to help you rise to the challenge by offering the broadest range of advanced wound care products in the industry and delivering a comprehensive package of educational resources. This approach ensures your facility has the tools and expertise to tackle difficult-to-heal chronic wounds.

**Seeing Things Differently**
Medline has a long history of rapid innovation in wound care with no intention of slowing down. The challenges you face in managing chronic wounds drive us to develop new solutions, positively affecting the quality and efficiency of care.

**Medline’s Latest Innovations**
- PluroGel® concentrated surfactant (Micelle Matrix™) technology
- Optifoam® Gentle Post-op with Smart Stretch™ technology
- Puracol® Ultra high quality 100% collagen powder
- Opticell® with Chytoform technology
EMPOWERING CLINICIANS THROUGH CUSTOMIZED SUPPORT.

Medline’s clinical and educational resources provide you with support you need to raise the standard of care. As our valued customer, we invite you to review the resources available with your Medline representative to develop a unique support plan tailored to your needs.

» **Skin Health Product Specialists**
Medline product specialists are trained to help you optimally leverage the support Medline offers as you strive to enhance quality of care.

» **Educational Packaging**
Medline’s award-winning educational packaging ensures that caregivers have complete step-by-step instructions for use at their fingertips.

» **Medline University**
Medline University empowers you to take, assign, and track progress on free online courses designed to enhance expertise.

» **Skin Health Hotline**
The Skin Health Hotline allows access to a board-certified wound care nurse from 8am–5pm Central Standard Time Monday–Friday. 1-888-701-SKIN (7546)

» **The NE1 Wound Assessment Tool**
This proprietary wound assessment tool is designed to dramatically increase accuracy, consistency and transparency in wound assessment.

» **Skin Health Solutions**
Minimize care variation across your facility with a customized approach to standardizing product, practice and education.

» **Wound & Skin Care Guidelines**
Medline offers clinical support in helping you determine and communicate your treatment guidelines.

» **Online Product Application Videos**
A complete library of instructional application videos helps train new staff on proper product application. Visit: www.medline.com/awcvideos

» **Advanced Wound & Skin Care Pocket Reference Guide**
This compact booklet contains a wealth of clinical and product information. Designed to be used by caregivers as a reference tool.

» **Skin Health Product Selector App**
Customizable mobile app provides easy-to-use product recommendations customized to wound conditions and your treatment formulary.
DIMES – YOUR WOUND CARE NAVIGATOR

DIMES – FOR SUCCESSFUL CHRONIC WOUND CARE
Wound care professionals face diverse and complex challenges. That’s why Medline offers a wide variety of products and programs that help clinicians deliver world-class care tailored to any given clinical context.

Throughout this catalog, you’ll find evidence-based products*, information and resources, all organized around the DIMES system of wound bed preparation and treatment.

*Contact Medline Industries, Inc. for data related to the products mentioned herein.

PluroGel® 8
TheraHoney® 12
PluroGel is a unique burn and wound dressing utilizing Micelle Matrix Technology™, a concentrated, cell-friendly surfactant that aids in maintaining an optimal moist wound healing environment. PluroGel helps to protect the wound and soften wound debris.

Promoting Patient Comfort

100% water soluble
PluroGel softens wound debris and allows it to easily rinse off at dressing change, creating a positive dressing change experience.

Gentle, non-irritating formula
Allows for a gentle patient experience.

Better adherence to wounds
PluroGel maintains its consistency, enabling it to remain on the wound bed for better protection.
PluroGel Micelle Matrix

PluroGel’s unique micelle gel matrix maintains moisture in the wound and helps control fluid loss, helping to protect the wound and to soften wound debris.

Anatomy of a Micelle

PluroGel’s micelle matrix contains surfactant micelles. A micelle’s hydrophilic surface bonds with water, facilitating movement in the wound environment. Exudate and wound debris is absorbed within the hydrophobic core, allowing for easy removal at dressing change.
**PLUROGEL®**
Burn and Wound Dressing

**RECOMMENDED USES**
» Partial and full-thickness wounds  
» First and second degree burns

**RECOMMENDED SECONDARY DRESSINGS**
» Optifoam® Gentle  
» Stratasorb® Composite

**INDICATIONS**
» Light to moderately draining wounds

**CHANGE FREQUENCY**
» PluroGel should be changed daily or as needed or directed by a physician to keep wound moist.

**ABOUT PLUROGEL**
» 100% water-soluble, bio-compatible, cell-friendly  
» Softer wound debris rinses off more easily at dressing change  
» Helps to create and maintain a moist microenvironment  
» Remains on the wound bed for better protection

Clinical Highlight

Full thickness right heel trauma wound
THERAHONEY®
100% Medical-Grade Manuka Honey

RECOMMENDED USE
» All wound depths
» All drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» OptiLock®
» Qwick™

INDICATIONS
» Partial- and full-thickness wounds
» Leg ulcers
» Pressure injuries
» First- and second-degree burns
» Diabetic foot ulcers

» Surgical and trauma wounds
» Minor abrasions, lacerations, and cuts
» Minor scalds and burns

CHANGE FREQUENCY
» TheraHoney may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Individuals with a known sensitivity to honey or bee venom

ABOUT THERAHONEY

» Made of 100% medical-grade honey (Leptospermum scoparium)¹
» Promotes autolytic debridement via high sugar levels (87%)²,³,⁴
» Helps rapidly reduce odor²,⁴
» Creates a moist wound-healing environment⁴
» Should be paired with an absorbent dressing⁵
» Compatible with silver dressings and wound cleanser surfactants⁶

DID YOU KNOW?
TheraHoney draws fluid from the wound bed, encouraging autolytic debridement. Use Qwick in conjunction with TheraHoney for optimal absorbency. For more information on Qwick, see pg. 46.

OPTICELL® Ag+
Antibacterial Chitosan-Based Gelling Fiber

EXPECT MORE FROM YOUR GELLING FIBER.

Opticell Ag+ utilizes Chytoform™, Medline’s chitosan-based gelling fiber technology, to deliver excellent benefits to wounds. Opticell Ag+ is highly absorbent and can be moistened to address dry or lightly draining wounds.

Opticell Ag+ delivers broad spectrum antibacterial efficacy without harming skin cells (noncytotoxic).
Opticell Ag+ is highly conformable and retains its shape and size in the wound better than other gelling fibers. This quality ensures that Opticell Ag+ remains in optimal and complete contact with the wound even as it absorbs moisture.

**Opticell with Chytoform technology**

The smooth, thin and conformable profile provides for intimate contact with the wound.

**Competition (Stitched Gelling Fiber)**

The ridges in the dressing may lead to an uneven wound contact surface.

---

<td><img src="image" alt="Bar Graph" /></td>
</tr>
</tbody>
</table>

Average Fluid Absorbed (g/100cm²)

Based on in vitro testing, Opticell had the highest average absorbency of the three dressings tested.

Opticell's exceptional absorption capacity helps reduce dressing change frequency and limit maceration.

**OPTICELL® Ag+**
Antibacterial Chitosan-Based Gelling Fiber

**RECOMMENDED USE**
- All wound depths
- All drainage levels
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- Bordered gauze
- Stratasorb® Composite

**INDICATIONS**
- Partial- and full-thickness wounds
- Venous stasis ulcers
- Pressure injuries/ulcers
- First- and second-degree burns
- Diabetic foot ulcers
- Surgical wounds
- Trauma wounds
- Donor sites
- Arterial ulcers and leg ulcers of mixed etiology

**CHANGE FREQUENCY**
- May be left in place for up to 7 days
- Dressing change frequency will depend on the amount of drainage

**CONTRAINDICATIONS**
- Individuals with a sensitivity to silver or chitosan, which is derived from shellfish
- Third-degree burns

**ABOUT OPTICELL Ag+**
- Chytoform™ gelling fiber technology
- Broad spectrum antibacterial ionic silver
- Highly conformable
- No lateral wicking – limits maceration
- Highly absorbent
- Maintains a moist wound-healing environment
- Surface area memory (SAM) – retains its size
- Designed to minimize pain during removal

**Clinical Highlight**

*In vitro* antibacterial efficacy of Opticell Ag+
Opticell Ag+ has been shown to effectively kill microorganisms for up to 7 days, including:

- Methicillin-resistant *Staphylococcus aureus* (MRSA) ATCC 33591—gram positive bacteria
- *Escherichia coli* ATCC 8739—gram negative bacteria
- *Pseudomonas aeruginosa* ATCC 9027—gram negative bacteria
- *Candida albicans* ATCC 10231—yeast
- Vancomycin-resistant *Enterococcus faecium* (VRE) ATCC 51575—gram positive bacteria
- *Staphylococcus aureus* ATCC 6538—gram positive bacteria

What’s Inside?
Chytoform is the chitosan-based gelling fiber technology inside Opticell. Chitosan is derived from shellfish, bringing the science of the ocean to wound care.
MAXORB® Ag+
Antibacterial Calcium Alginate Dressings

RECOMMENDED USE
» All wound depths
» Moderate to heavy drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» Stratasorb® Composite
» Bordered gauze

INDICATIONS
» Pressure injuries
» Leg ulcers
» First- and second-degree burns
» Moderate to heavily draining partial- and full-thickness wounds

» Diabetic foot ulcers
» Surgical wounds
» Graft and donor sites
» Trauma wounds

CHANGE FREQUENCY
» Maxorb II Ag+ may be left in place for 7 days
» Maxorb Extra Ag+ may be left in place for up to 21 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Dry or lightly draining wounds
» Patients with a known sensitivity to alginate or silver
» To control heavy bleeding
» As a surgical implant

ABOUT MAXORB Ag+
» Helps manage bacterial burden
» Controlled-release ionic silver
» Easy dressing changes
» Highly absorbent
» Reduces odor
» Reinforced silver CMC/alginate ribbon
» Ribbon is ideal for tunneling or undermining wounds
» Cost-effective

Clinical Highlight

Modified Asepsis Index
Asepsis index is a measure of 10 wound healing parameters. A lower score is preferable.

![Graph showing results of Modified Asepsis Index over time for Kaltostat and Maxorb Extra Ag+][1]

[1]: Graph illustrating the Modified Asepsis Index results for Kaltostat and Maxorb Extra Ag+ over pre-treatment and weeks 1 to 4, with Kaltostat showing a higher score compared to Maxorb Extra Ag+.

OPTIFOAM® GENTLE Ag+
Antimicrobial Silicone Foam Dressings

RECOMMENDED USE
- All wound depths*
- All wound drainage levels
- As a primary or secondary dressing

RECOMMENDED SECONDARY DRESSINGS**
- Gentac™ tape
- Elastic net
- Medigrip™ Tubular Bandage

*May be used as a secondary dressing for deep wounds
**Only non-bordered dressings require a secondary dressing

INDICATIONS
- Pressure injuries
- Partial- and shallow full-thickness wounds
- Surgical wounds
- Wounds with colonization
- Leg ulcers
- Diabetic foot ulcers
- Donor sites
- Lacerations and abrasions
- Skin tears
- First- and second-degree burns

CHANGE FREQUENCY
- Optifoam Gentle Ag+ may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
- Third-degree burns
- Lesions with active vasculitis
- Individuals with a known sensitivity to silver

ABOUT OPTIFOAM GENTLE Ag+
- Silicone dressing provides gentle adhesion
- Highly conformable†
- Moisture vapor transmission rate (MVTR) adjusts to fluid level
- Ionic silver provides an antimicrobial barrier†
- Continuous antimicrobial barrier protection†
- Helps maintain a moist wound-healing environment
- Waterproof outer layer
- Highly absorbent†
- Non-staining
- Low friction and shear outer layer

OPTIFOAM® Ag+ POST-OP
Antimicrobial Foam Post-Op Dressing

RECOMMENDED USE
» Incision sites
» All wound drainage levels
» As a primary or secondary dressing

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Post-operative wounds

CHANGE FREQUENCY
» Optifoam Ag+ Post-Op may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Lesions with active vasculitis
» Individuals with a known sensitivity to silver

Clinical Highlight
Comparative Antimicrobial Effect Study
Optifoam Ag+ has the least number of surviving colony forming units at four hours.

4 hrs. at 37°C exposure to 4 sq cm of each dressing 106 - 107 Colony Forming Units (CFUs) initial population

References

ABOUT OPTIFOAM Ag+
POST-OP
» Ionic silver provides antimicrobial barrier over incision sites
» Continuous antimicrobial protection
» Thin, conformable adhesive border
» Can manage repeated bacteria introduction
» Non-staining
» Waterproof backing
» Moisture vapor transmission rate (MVTR) adjusts to fluid level
» Helps maintain a moist wound-healing environment
» Silicone adhesive border (only for Optifoam Gentle Ag+ Post-Op)

PRIMASEAL® POST-OP Ag+
Hydrocolloid border dressing with antibacterial silver

RECOMMENDED USE
» Incision sites
» All wound drainage levels
» As a primary or secondary dressing

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Post-operative wounds

CHANGE FREQUENCY
» PrimaSeal Post-Op Ag+ may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Individuals with a known sensitivity to dressing components

ABOUT PRIMASEAL POST-OP Ag+
» Ionic silver provides antibacterial barrier1 over incision sites
» Continuous antibacterial protection1
» Can manage repeated bacteria introduction1
» Non-staining
» Hydrocolloid adhesive border
» Highly breathable film to help maintain moisture balance within incision site

Clinical Highlight
Comparative Antibacterial Effect Study1
PrimaSeal Post-Op Ag+ achieves a faster 4 log kill than a competitive surgical dressing

Numbers of hours required to achieve 4 log kill within first 6 hours of microbe exposure1

OPTIFOAM® Ag+  
Antimicrobial Foam Dressings

RECOMMENDED USE
- All wound depths*
- All wound drainage levels
- Primary or secondary dressing

RECOMMENDED SECONDARY DRESSINGS**
- Medfix™ Tape
- Gentac™ Tape
- Medigrip™ Tubular Bandage

*As a secondary dressing
**Only non-bordered dressings require a secondary dressing

INDICATIONS
- Pressure injuries
- Partial- and full-thickness wounds
- Surgical wounds
- Wounds with colonization
- Ideal for managing bioburden in post-operative wounds.
- Leg ulcers
- Diabetic foot ulcers
- Donor sites
- Lacerations and abrasions
- First- and second-degree burns
- Under compression bandages

CHANGE FREQUENCY
- Optifoam Ag+ may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
- Third-degree burns
- Lesions with active vasculitis
- Individuals with a known sensitivity to silver

ABOUT OPTIFOAM Ag+
- Ionic silver provides an antimicrobial barrier
- Continuous antimicrobial protection
- Absorbent
- Conformable
- Can manage repeated bacteria introduction
- Non-staining
- Moisture vapor transmission rate (MVTR) adjusts to fluid level
- Helps create an ideal healing environment
- Waterproof outer layer
- Low friction and shear outer layer
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

¹. Data on file.
SILVASORB®
Antimicrobial Hydrogel Dressings

RECOMMENDED USE
- All wound depths
- Light to moderately draining wounds
- As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
- Stratasorb® Composite
- Bordered gauze
- Optifoam® Gentle

INDICATIONS
- Pressure injuries
- Partial- and full-thickness wounds
- Leg ulcers
- Diabetic foot ulcers
- Graft wounds and donor sites

CHANGE FREQUENCY
- Amorphous gel may be left in place for up to 3 days
- Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
- Individuals with a known sensitivity to silver

ABOUT SILVASORB
- Helps manage bacterial burden1,2
- Ionic silver
- Continuous antimicrobial protection1,3
- Non-staining1
- Gentle for the patient4,5
- Advanced fluid management1
- Extended wear time1,3,4,7

Clinical Highlight
Survival Curve with SilvaSorb1
SilvaSorb has powerful antimicrobial activity (in vitro), 6–8 log reduction within four hours.

Clinical Highlight

Pressure Ulcer Case Study
A 93 year-old wheelchair-bound male with no significant nutritional deficits developed a chronic trochanteric pressure ulcer. The ulcer was treated with various wound care therapies for four months without progress. The wound bed was friable and therefore presumptive for high bioburden. It was elected to start an antimicrobial dressing in conjunction with off-loading the affected hip. Closure was attained within four weeks.

Before

After 4 weeks

Source: Mary Nametka, RN, MSN, CS, CWS, CWCN, Adventist Medical Center, Portland OR, Study Site Avamere LTC Facility, Portland OR. Presented at the Annual Symposium on Advanced Wound Care, April 27-29, 2002.
AG+ POWDER
Antimicrobial Powder

RECOMMENDED USE
» All wound depths
» Light to heavily draining wounds
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Stratasorb® Composite
» Bordered gauze
» Suresite® 123+Pad

INDICATIONS
» Pressure injuries
» Diabetic foot ulcers2
» Partial- and full-thickness wounds
» Leg ulcers
» Negative pressure wound therapy

» Grafted wounds
» Donor sites
» Lacerations and abrasions
» First- and second-degree burns

CHANGE FREQUENCY
» Ag+ Powder may be left in place for up to 5 days
» Dressing change frequency will depend upon the amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Patients with a known sensitivity to silver
» As a surgical implant
» Do not use topical antibiotics in conjunction with Ag+ Powder

ABOUT AG+ POWDER
» Manages bacterial burden1
» Continuous antimicrobial protection1
» Extended wear time1
» Non-staining
» An ideal complement when used with other wound dressings

Achieving the right moisture balance can be a challenge. Too much moisture can lead to periwound maceration and skin breakdown, while too little moisture can impede cellular activities and promote eschar formation, resulting in poor wound healing.

OPTIFOAM® GENTLE
Absorbent Foam Dressings With Silicone Adhesive

CHOOSE GENTLE.

Optifoam Gentle helps ease the pain and trauma of dressing changes. Featuring a specially-formulated silicone adhesive that helps keep it in place, Optifoam’s absorbent core absorbs and retains fluid, protects against infection*, and helps protect against shear and friction.

» Waterproof film acts as a bacterial barrier
» Foam and superabsorbent core absorb and retain exudate
» Silicone adhesive minimizes trauma and reduces pain upon wear or removal

*available on Ag dressings only

FOAM DRESSINGS HELP REDUCE HOSPITAL ACQUIRED PRESSURE ULCERS (HAPU).

Studies in the evaluation of the use of a foam dressing with silicone border on patients at risk for HAPU resulted in a significant reduction in pressure ulcers over a 3-month period with lower monthly incidence and enhanced prevention.1

OPTIFOAM® GENTLE
Foam Dressings

RECOMMENDED USE
» All wound depths*
» All wound drainage levels
» As a primary or secondary dressing
*May be used as a secondary dressing for deep wounds

RECOMMENDED SECONDARY DRESSINGS†
» Gentac Tape
» Elastic net
» Medigrip Tubular Bandage
†Applies to Optifoam Silicone Faced Foam only

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Donor sites
» Lacerations and abrasions
» Skin tears
» First- and second-degree burns

CHANGE FREQUENCY
» Optifoam Gentle may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns

ABOUT OPTIFOAM GENTLE
» Silicone adhesive provides gentle adhesion
» Highly conformable† dressing can be lifted and reapplied
» Moisture vapor transmission rate (MVTR) adjusts to fluid level
» Highly absorbent†
» Helps create ideal healing environment
» Waterproof outer layer protects wound and keeps bacteria out
» Low friction and shear outer layer

» Gentac™ Tape
» Medigrip™ Tubular Bandage
*Applies only to Optifoam Non-Adhesive, Optifoam Basic and Optifoam Heel

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Donor sites
» Lacerations and abrasions
» Skin tears
» First- and second-degree burns

CHANGE FREQUENCY
» May be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Lesions with active vasculitis

ABOUT OPTIFOAM
» Moisture vapor transmission rate (MVTR) adjusts to fluid level
» Absorbent
» Helps create an ideal healing environment
» Waterproof outer layer protects wound and keeps bacteria out (except Optifoam Basic)
» Optifoam Heel is specifically designed for use on the heel

Clinical Highlight

Coefficient of Friction of Film Backing¹

Absorption Capacity Under Compression¹

Optifoam Heel has 50% less friction than the leading heel shaped dressing.

Optifoam Heel absorbs 44% more under compression than the leading heel shaped dressing.

ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

**OPTICELL®**
Chitosan-Based Gelling Fiber

**RECOMMENDED USE**
- All wound depths
- All drainage levels
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- Bordered gauze
- Stratasorb® Composite

**CHANGE FREQUENCY**
- Opticell® may be left in place for up to 7 days
- Opticell may remain in place up to 14 days in the context of burn treatment
- Dressing change frequency will depend on the amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns
- Individuals with a sensitivity to chitosan, which is derived from shellfish

**INDICATIONS**
- Partial- and full-thickness wounds
- Venous stasis ulcers
- Pressure injuries
- First- and second-degree burns
- Diabetic foot ulcers
- Surgical wounds
- Trauma wounds
- Donor sites
- Arterial ulcers and leg ulcers of mixed etiology
- Oncology wounds

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- Bordered gauze
- Stratasorb® Composite

**ABOUT OPTICELL**
- Chytoform™ gelling fiber technology
- Controls minor bleeding
- Highly conformable
- No lateral wicking – limits maceration
- Highly absorbent
- Maintains a moist wound-healing environment
- Surface area memory (SAM) – retains its size
- Gentle removal from the wound
- Designed to minimize pain upon removal

QWICK™
Superabsorbent Dressings

RECOMMENDED USE
» All wound depths
» Moderate to heavy drainage
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Bordered gauze
» Optifoam Gentle
» Elastic net

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Lacerations and abrasions
» Wounds under compression

CHANGE FREQUENCY
» Qwick may be left in place for up to 7 days
» Dressing change frequency will depend on the amount of drainage

CONTRAINDICATIONS
» Third-degree burns

ABOUT QWICK
» Multilayer construction wicks and retains fluid to help protect the skin from maceration
» Can be cut to fit
» Flexible
» Superabsorbent
» Wicking
» Featuring Aquaconductive™ Technology
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

Qwick Superabsorbent Aquaconductive™ Dressing
Superabsorbent conformable dressing with Aquaconductive™ technology

Aquaconductive Technology
Aquaconductive Technology is the mechanism by which the three layers of Qwick wound dressing pull exudate away from or out of the wound to help create an optimal moist wound-healing environment.
OPTILOCK®
Superabsorbent Dressings

RECOMMENDED USE
» All wound depths*
» Moderate to heavy drainage
» As a primary dressing

*As a secondary dressing for deep wounds

RECOMMENDED SECONDARY DRESSINGS
» Medfix™ Tape
» Elastic net
» Gentac® Tape
» CoFlex® TLC Two Layer Compression System

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Lacerations and abrasions
» Wounds under compression

CHANGE FREQUENCY
» OptiLock may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Individuals with a known sensitivity to the product itself or its components

ABOUT OPTILOCK
» Superabsorbent polymer core
» Locks in drainage under compression
» Adjusts absorption to the amount of drainage
» Protects skin from maceration
» Non-adherent wound contact layer

DID YOU KNOW?
OptiLock is ideal for highly draining venous leg ulcers because of its gentle contact layer and fluid-locking feature. Even under high compression bandages, the fluid is retained in the dressing. Use OptiLock in conjunction with CoFlex TLC compression bandage system. To learn more, see pg. 76.
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number. 
To order by the dressing, add “H” to the end of the item number.

OPTILOCK SUPERABSORBENT DRESSING
Non-adherent and superabsorbent dressing

Clinical Highlight

OptiLock Absorbs and Retains More Fluid
In manufacturer’s laboratory testing, Medline’s OptiLock dressings outperformed a leading silicone-faced foam dressing. OptiLock’s remarkable absorption and fluid retention capabilities raise the bar for gentle wound care.

MAXORB®
Calcium Alginates

RECOMMENDED USE
» All wound depths
» Moderate/heavy drainage
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» Bordered gauze
» Stratasorb® Composite

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Diabetic ulcers
» Surgical wounds
» Donor sites
» Lacerations and abrasions
» First- and second-degree burns

CHANGE FREQUENCY
» May be left in place for up to 7 days
» Dressing change frequency will depend on the amount of drainage

CONTRAINDICATIONS
» Individuals with a known sensitivity to alginates
» Third-degree burns
» To control heavy bleeding
» As a surgical sponge
» Dry or lightly draining wounds

ABOUT MAXORB
» Maxorb II is a 100% calcium alginate dressing
» Maxorb Extra is a blend of CMC and calcium alginate fibers
» Maxorb ES is reinforced for easy removal from tunneling wounds
» Superior fluid handling
» High wet strength—removes in one piece
» Fluid does not wick laterally
» Improved gelling capability

Clinical Highlight
Maxorb II Absorbency Comparison

**ORDERING INFORMATION**

To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

EXUDERM®
Hydrocolloid Dressings

RECOMMENDED USE
» All wound depths*
» All drainage levels
» As a primary dressing

*As a secondary dressing for deep wounds

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Donor sites

» Wounds with light to moderate drainage
» Lacerations and abrasions
» First- and second-degree burns

CHANGE FREQUENCY
» Exuderm dressings can be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns

ABOUT EXUDERM
» Manages drainage^ to help maintain a moist wound healing environment
» Longer wear time
» Protective, occlusive barrier
» Satin-finish backing is low friction for longer wear time

Clinical Highlight

Water Absorption^ Percent of absorption at 24 hours

ORDERING INFORMATION
To order by the dressing, add “H” to the end of the item number.

HYDROGEL DRESSINGS
Hydrogels, Hydrogel Impregnated Gauzes, and Hydrogel Sheets

RECOMMENDED USES
» All wound depths
» No/minimal drainage
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Stratasorb® Composite
» Bordered gauze
» Suresite® 123+Pad

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Surgical wounds
» Lacerations, abrasions and skin tears
» First- and second-degree burns

CHANGE FREQUENCY
» Skintegrity may be left in place for up to 3 days
» Derma-Gel may be left in place for up to 5 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Patients with a known sensitivity to components of the gel
» Heavily draining wounds

ABOUT HYDROGELS
» Donate moisture
» Rinse easily from the wound
» Skintegrity 1-oz. bellows bottle reduces waste and eases application
» Skintegrity Hydrogel Impregnated Gauze combines gauze with hydrogel for easy delivery to wounds that require packing
» Carrasyn Hydrogel available in an 8-oz. spray bottle

Clinical Highlight
Cytotoxicity Test For Skintegrity Hydrogel
Using Murine L929 Embryo Fibroblasts Agar Overlay Neutral Red Assay

If the wound edge is not migrating after appropriate wound bed preparation (debridement, infection/inflammation, moisture balance) and healing is stalled, then advanced therapies should be considered.

BIOLOGICALLY-DERIVED PRODUCTS FEATURE A SCAFFOLD WHERE NATIVE CELLS CAN PROLIFERATE AND ULTIMATELY REBUILD TISSUE.
Look inside...

Puracol®  58
Hyalomatrix®  62
Our Puracol wound dressings promote natural healing with type I 100% native collagen. Our exclusive, gentle manufacturing technology preserves the collagen’s natural structure, resulting in increased surface area in contact with the wound site.

**EXTRACELLULAR MATRIX PROTEINS**

Puracol Ultra ECM Features the Most Sophisticated Scaffold Yet

This robust biological matrix, derived from porcine peritoneal membrane, consists primarily of type I collagen with additional extracellular matrix (ECM) proteins. It is decellularized, gamma-radiated and freeze-dried to yield a shelf stable product that provides an environment for wound management.
WELL-ESTABLISHED. WELL-DOCUMENTED.

Collagen is the main structural protein that supports the cells and tissues of the human body. Because of this, collagen is the most abundant protein found in humans and mammals. Therefore, it is not uncommon to see collagen used throughout various medical fields including wound care. All commercially available collagen wound dressings, however, are not the same.

Made of 100% native collagen, our Puracol wound dressings exclusive, gentle manufacturing technology preserves collagen’s natural triple helix structure to promote healing. By maintaining the integrity of native collagen, Puracol can aid in broad-spectrum protease regulation and act as a three-dimensional MicroScaffold for the body’s own cells to live, thrive and rebuild tissue.

CLINICAL STUDY
Evaluation of a Bovine 100% Native Collagen for the Treatment of Chronic Wounds

After managing the wounds with a bovine-derived, 100% native, type I collagen, 83% achieved wound closure within 90 days. (15 out of 18 patients)

PURACOL®
Collagen Dressings

RECOMMENDED WOUND CONDITIONS
» All wound depths
» All drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» Stratasorb® Composite
» Bordered gauze
» Optifoam® Adhesive

INDICATIONS
» Pressure, venous, diabetic ulcers
» Partial- and full-thickness wounds
» Ulcers caused by mixed vascular etiologies
» Donor sites and other surface wounds

» Abrasions
» Traumatic wounds healing by secondary intention
» Dehisced surgical wounds

CHANGE FREQUENCY
» Puracol Plus and Puracol Plus Ag+ may be left in place for up to 7 days or replaced at the discretion of a healthcare professional
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Active vasculitis or patients with known sensitivity to collagen
» Puracol Plus Ag+ only: patients with known sensitivity to silver;
» Third-degree burns

INDICATIONS
» Pressure, venous, diabetic ulcers
» Partial- and full-thickness wounds
» Ulcers caused by mixed vascular etiologies
» Donor sites and other surface wounds

CHANGE FREQUENCY
» Puracol Plus and Puracol Plus Ag+ may be left in place for up to 7 days or replaced at the discretion of a healthcare professional
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Active vasculitis or patients with known sensitivity to collagen
» Puracol Plus Ag+ only: patients with known sensitivity to silver;
» Third-degree burns

ABOUT PURACOL PLUS
» 100% collagen with a high degree of nativity
» High gel integrity
» Helps promote a natural wound environment conducive to wound healing
» Biodegradable
» Can be used in combination with negative pressure wound therapy (NPWT)

ABOUT PURACOL ULTRA POWDER
» Maintains a high degree of nativity
» Increases the surface area in contact with the wound site
» Conforms to irregular shaped wound sites

ABOUT PURACOL PLUS Ag+
In addition to all the benefits of Puracol Plus:
» Ionic silver provides antimicrobial barrier
» Non-staining

References
**HYALOMATRIX®**

Esterified Hyaluronic Acid Matrix

**RECOMMENDED WOUND CONDITIONS**

» All wound depths
» All drainage levels
» Primary layer

**RECOMMENDED SECONDARY DRESSINGS**

» Versatel®
» Qwick™
» OptiLock®
» Sterile adhesive strips

**INDICATIONS**

» Pressure, venous, diabetic ulcers
» Partial- and full-thickness wounds
» Chronic vascular ulcers
» Second-degree burns
» Tunneled/undermined wounds

» Surgical wounds (donor sites/grafts, post-Mohs surgery, post-laser surgery, podiatric, wound dehiscence)
» Trauma wounds (abrasions, lacerations, second-degree burns, skin tears)
» Draining wounds

**CHANGE FREQUENCY**

» Removal of the silicone layer is recommended when the tissue underneath is healed, or ready for grafting, typically 14 to 21 days after application

**CONTRAINDICATIONS**

» Individuals with a hypersensitivity to hyaluronan and/or its derivatives and silicone

**ABOUT HYALOMATRIX**

» Primary layer comprised entirely of HYAFF® esterified hyaluronic acid
» Acts as a scaffold for cellular colonization and capillary growth
» Facilitates ordered reconstruction of the dermal tissue
» Semipermeable silicone membrane controls water vapor loss
» Can be used in combination with negative pressure wound therapy (NPWT)

**DID YOU KNOW?**

Hyalomatrix can occasionally emit odor as it incorporates into the underlying tissue of the wound bed. To help reduce odor, irrigate with a high-performance wound cleanser like Prophase. To learn more, see pg. 91.
ORDERING INFORMATION
*To order by the each, add “H” to the end of the item number.

HYALOMATRIX HYALURONIC ACID WOUND DEVICE

MARATHON®
No-Sting Cyanoacrylate Skin Protectant

INNOVATING SKIN PROTECTION WITH CYANOACRYLATE TECHNOLOGY

Marathon No-Sting Cyanoacrylate Skin Protectant provides a long-lasting, robust barrier that defends damaged or intact skin from breakdown caused by moisture, friction, shear, and adhesive stripping.

This technology bonds to the skin through the polymerization process, becoming an additional layer of skin that will wear off as the epidermis naturally renews.
TESTED AND PROVEN.

An independent study tested 12 subjects ages 60+ and compared how bare skin, skin with an application of Marathon, and skin with an application of Cavilon® resisted exposure to a corrosive fluid (synthetic urine).

RESULTS:
Areas where Marathon was applied showed better resistance after each of the five urine and wash-off cycles compared to the areas where Cavilon or no product at all were applied.

“Today was a teary moment when Marathon worked for my patient that uses duct tape. She no longer needs duct tape for her ostomy. Marathon is holding strong, and she is elated.”

—Carrie Dean RN, CWCN
MARATHON®
No-Sting Cyanoacrylate Skin Protectant

RECOMMENDED USES
» Protection from moisture-associated skin damage
» Protection from friction and shear
» Protection from adhesive trauma

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
Protects intact or damaged skin from:
» Body fluids
» Moisture
» Friction and shear
» Adhesive stripping

CHANGE FREQUENCY
» Up to 3 days, reapply as needed

CONTRAINDICATIONS
Do not apply directly to:
» Deep, open, bleeding, or chronic wounds
» Second- or third-degree burns
» Infected areas

ABOUT MARATHON
» Robust, flexible and long-lasting
» Non-stinging; contains no solvents or activators
» Protects from the effects of friction and shear
» Protects from moisture-associated skin damage caused by urine, exudate, perspiration, and other body fluids
» Can be used on intact or damaged skin
» Fast drying
» Breathable

Clinical Highlight
Cyanoacrylate-based Barrier
A >20 μm layer of cyanoacrylate-based barrier can be clearly seen at x200 magnification. There are NO visible gaps between the skin and Marathon, since it bonded directly to the skin.³

Solvent-based barrier
The approximate <5 μm layer of a solvent-based barrier at x200 magnification is seen in this image. The gap between the skin and the solvent-based barrier is visible.⁴

**DID YOU KNOW?**

Marathon provides robust, breathable protection which facilitates wound closure. Use Marathon in conjunction with Opticell Ag+ to treat or prevent maceration of the periwound. To learn more, see pg. 16.
**SUREPREP®**
Skin Protectants

**RECOMMENDED USES**
- Protection from moisture associated skin damage
- Protection from corrosive fluids
- Protection from adhesive trauma

**INDICATIONS**
To be applied to intact or damaged skin in order to provide a primary barrier against:
- Bodily fluids
- Adhesive stripping

**CHANGE FREQUENCY**
- Up to 72 hours or with every dressing change

**RECOMMENDED SECONDARY DRESSINGS**
- Not Applicable

**CONTRAINDICATIONS**
- On infected areas of skin
- Near the eyes
- As the only covering in situations that require additional dressing protection from bacterial contamination/penetration, e.g., intravenous therapy catheter sites and full- or partial-thickness wounds

**TRANSEPIDERMAL WATER LOSS (TEWL)4**
On day 4 and day 5, subjects using Sureprep No-Sting experienced significantly less water loss than subjects using 3M Cavilon No-Sting

**ABOUT SUREPREP**
- Protects from adhesive stripping
- Safe for delicate skin
- Outperformed 3M Cavilon® in controlled study
- Fast drying
- Vapor permeable
- Creates a waterproof barrier on periwound skin
- Protection from friction and body fluids
- Transparent

**Clinical Highlight**
Transepidermal Water Loss (TEWL)⁴
On day 4 and day 5, subjects using Sureprep No-Sting experienced significantly less water loss than subjects using 3M Cavilon No-Sting

DID YOU KNOW?
TheraHoney gel promotes autolytic debridement, which can increase drainage. To protect the periwound from maceration use Sureprep Rapid dry. To learn more, see pg. 12.

References
HELP PREVENT AND TREAT VENOUS DISEASE.

Chronic venous insufficiency (CVI) occurs when venous walls or valves do not work effectively and have difficulty moving blood toward the heart. CVI causes the blood to pool in the leg, leading to increased pressure and swelling. This additional pressure can cause fluid and blood to leak out of veins, which can lead to skin staining and venous ulcers.

ACCUTAB® COMPRESSION MEASUREMENT

BREATHABLE COTTON LINER

Quickly identify the correct pressure range
CUSTOMIZED COMPRESSION AT YOUR FINGERTIPS.

Take the guesswork out of achieving proper compression with COMPRECARES Compression Garment with ACCTAB system.

» Compression levels of 20-30, 30-40 and 40-50 mmHg
» Transition liner has graduated compression throughout the leg
» Specially designed fabric wicks away moisture to help avoid skin damage
» Each pack includes 2 reusable socks—one to wash and one to wear—for up to 6 months

Roll back straps for easy application
Contoured calf for a superior fit
Front stretch panel secures garment in place
Double-stitched to ensure durability
Soft, conformable Breathe-O-Prene® fabric

Easy to apply and adjust for increased patient compliance
COMPRECARES™
Compression Garment with Transition Liner

RECOMMENDED USES
» Venous leg ulcers

RECOMMENDED PRIMARY DRESSINGS
» Qwick
» Opticell Ag+
» OptiLock

INDICATIONS
» Chronic Venous Insufficiency (CVI)
» Edema
» Venous stasis ulcers
» Lymphedema

CHANGE FREQUENCY
» Comprecares compression system may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Acute-untreated cellulitis, or other major skin infections
» Acute-untreated Deep Vein Thrombosis (DVT)
» Untreated kidney disease
» Severe Peripheral Arterial Disease (PAD), or an ankle-brachial pressure index (ABI) less than 0.5
» Untreated specitic phlebitis
» Acute, decompensated CHF or Myocardial Infarction (MI)

ABOUT COMPRECARES
» Compression levels of 20-30, 30-40, and 40-50mmHg
» Transition liner has graduated compression throughout the leg
» Specially designed fabric wicks away moisture to help avoid skin damage
» Each pack includes 2 reusable socks—one to wash and one to wear—for up to 6 months

How to choose the right size.

1. Using a measuring tape with centimeters, measure the leg height from the center of outer ankle bone (point Ø) to the fibular head, as shown on the illustration. Record this measurement in the space provided for point G.

2. Measure around each part of the leg at the letters shown in the illustration: C1—30 cm above point Ø
   C—25 cm above point Ø
   B—15 cm above point Ø
   A—5 cm above point Ø

3. Use measurements A and C1 to determine the correct sizing for COMPRECARES Transition Liners.

Compare your measurements to the chart and select the size that matches.

If measurements C1, C, B and A align to multiple sizes, select the smaller garment and use a strap extender for the larger areas of the leg.

COFLEX® TLC
Two-Layer Compression System

RECOMMENDED USES
» Venous leg ulcers

RECOMMENDED PRIMARY DRESSINGS
» Qwick
» Opticell Ag+
» OptiLock

INDICATIONS
» To deliver therapeutic compression to manage venous disease and associated edema

CHANGE FREQUENCY
» CoFlex® TLC compression system may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Patients with severe arterial disease

Clinical Highlight

Amount of Water Absorbed

Absorption prior to runoff. Error bars represent the 95% confidence interval. 
P-value obtained from a one-tailed, paired t-test.
1. Data on file

ABOUT COFLEX TLC

» CoFlex TLC provides 30–40mmHg of therapeutic compression
» CoFlex TLC Lite provides 20–30 mmHg of therapeutic compression
» Low-profile system easily fits under clothing and footwear
» Absorbent padding bandage designed to wick away moisture and control odor
» Stocking included to ease movement
» Cohesive layer tears by hand
» Patient information card included in every kit
» Extra-long kit available for larger legs
» Easy and consistent application method
ORDERING INFORMATION

COFLEX TLC PROMOTES PATIENT EDUCATION
Research shows that when patients understand why they are receiving compression therapy they are more likely to be compliant**

DO MORE WITH LESS USING SHORT STRETCH COMPRESSION

Low-profile design for patient comfort
  » 90% of patients rated CoFlex TLC at least as comfortable as their current compression system.

Full-stretch application for easy, replicable compression
  » 95% of nurses rated CoFlex TLC at least as easy to apply as their current compression system

**FOURFLEX® AND THREEFLEX®**
Multilayer Compression Bandage System

**RECOMMENDED USE**
» Venous leg ulcers

**RECOMMENDED PRIMARY DRESSINGS**
» Qwick
» Opticell Ag+
» OptiLock

**INDICATIONS**
» To deliver therapeutic compression to manage venous disease and associated edema

**CHANGE FREQUENCY**
» Multilayer compression bandages may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
» Patients with severe arterial disease

**ABOUT FOURFLEX AND THREEFLEX**
» Effective therapeutic compression
» Extended wear time
» Absorbs drainage
» Educational packaging
» FourFlex XL is 25% longer for larger legs
» FourFlex and FourFlex XL delivers 30–40 mmHg of compression*
» ThreeFlex delivers 20–30 mmHg of compression*

* Data on file: compression values as measured at the ankle upon application, application per manufacturer’s guidelines

---

**Clinical Highlight**

**ABI Chart**
To determine the Ankle Brachial Index (ABI), divide the ankle systolic pressure by the brachial systolic pressure.

\[
\frac{\text{Ankle Pressure}}{\text{Brachial Pressure}} = \text{ABI}
\]

**Interpretation of the Ankle Brachial Index**

<table>

**MEDIGRIP™ AND MEDIGRIP™ LF**
Elasticated Tubular Bandages

**RECOMMENDED USES**
» Dressing Retention
» Light compression

**RECOMMENDED PRIMARY DRESSINGS**
» Qwick
» Opticell Ag+
» OptiLock

**INDICATIONS**
» Edema
» Treatment of chronic venous insufficiency
» Dislocations
» Sprains
» As a retention dressing

**CHANGE FREQUENCY**
» Medigrip may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
» None*

**ABOUT MEDIGRIP**
» Provides excellent support for joints
» Easy to apply and reapply
» Wide range of applications
» Good for securing dressings
» Can be used as mild compression when doubled
» Also comes in latex free version

*For full arm coverage, measure the largest part of the forearm. For full leg or below the knee coverage, measure the widest point of the calf. And, for the hand, measure around metacarpophalangeal joint.

**Low = 5–10 mm Hg (for general edema); Medium = 10–20 mm Hg (for varicose conditions/post-burn scarring); High = 20–30 mm Hg (for soft tissue injuries/joint effusions)
UNNA-Z™ AND UNNA-Z STRETCH
Unna Boot Bandages

RECOMMENDED USE
» Venous leg ulcers

RECOMMENDED COVERING WRAP
» Compression CoFlex LF2
» Bulkee® Gauze Wrap

RECOMMENDED PRIMARY DRESSINGS
» Qwick
» Opticell Ag+
» OptiLock

CHANGE FREQUENCY
» Unna-Z may be left in place for up to 7 days, depending on drainage

INDICATIONS
» Venous leg ulcers

CONTRAINDICATIONS
» Patients with a known sensitivity to components (zinc and/or calamine)

ABOUT UNNA-Z
» Maintains a moist healing environment
» Provides semi-rigid support for conditions requiring mild compression
» Impregnated with zinc oxide paste (with or without calamine)
» Improved knitted design
» Inner plastic core for easier application
» Unna-Z Stretch provides greater elasticity
ORDERING INFORMATION
To order by the dressing, add “H” to the end of the item number.

**DID YOU KNOW?**
Unna Z-Stretch features elasticity for enhanced conformability and easier application.
VERSATEL® AND VERSATEL ONE
Contact Layer Dressings

RECOMMENDED USES
» To prevent secondary dressing adhesion to the wound

RECOMMENDED SECONDARY DRESSINGS
» OptiLock®
» Qwick®
» Maxorb® II

INDICATIONS
» Dry to heavily draining abrasions
» Partial- and full-thickness wounds
» Venous ulcers or pressure injuries
» Skin tears
» First- and second-degree burns
» Blisters, cuts and lacerations
» Surgical and trauma wounds

CHANGE FREQUENCY
» Versatel may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Individuals with a known sensitivity to silicone
» Not for surgical implantation

Fluid Transferred Through Versatel
Versatel is designed to allow wound fluid to easily transfer into a secondary dressing.¹

ABOUT VERSATEL
» Silicone-based atraumatic adhesive
» Flexible and pliable to conform to body contours and improve comfort
» Versatel One features one-sided silicone contact for easy handling
» Reduces potential trauma from secondary dressing wound adherence
» Minimizes pain during removal
» Channels allow fluid to easily transfer to an absorbent dressing
» Translucent for easy wound visualization

REFERENCES

A typical highly exuding wound drains over 10 mL of fluid per day.² In an in vitro study that simulates the drainage of a wound, Versatel was shown to be an efficient transfer layer for fluid. Versatel allowed an average of 16.2 mL of fluid to pass through during 2.5 hours, which is equal to 155.52 mL per day.³
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

Easy Application Instructions

**Step 1:** Clean and dry wound and periwound area. Remove Versatel from package. Remove liner from one side of the dressing.

**Step 2:** Place dressing directly on wound and smooth into place. NOTE: Versatel can cover periwound skin or may be cut if necessary.

**Step 3:** Remove second liner if applicable (Versatel only). Cover with an appropriate secondary absorbent dressing such as Qwick. Versatel can be used under compression dressings.
COVER DRESSINGS
Adhesive Island Wound Dressing

RECOMMENDED WOUND CONDITIONS
» All wound depths
» All drainage levels
» Primary dressing
» Secondary dressing

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Incision sites

CHANGE FREQUENCY
» Can be left in place for up to 7 days
» Change the dressing as indicated by the amount of drainage or as frequently as the primary dressing indicates

CONTRAINDICATIONS
» Third-degree burns
» Patients with a known sensitivity to components of the dressing

ABOUT COVER DRESSINGS
» Non-adherent deluxe soaker pad
» Non-woven adhesive border
» Waterproof backing (Stratasorb)
» Water-resistant backing (Bordered Gauze)
» Ideal for incision sites
## ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

DRESSING RETENTION TAPE
Non-Woven, Silicone and Zinc Oxide Tape

RECOMMENDED USE
» Dressing retention

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» To secure primary dressings
» To secure gastrostomy tubes and other feeding tubes

CHANGE FREQUENCY
» Dressing change frequency will depend on the primary dressing and amount of drainage

CONTRAINDICATIONS
» Contraindicated as a primary dressing

ABOUT TAPE
» MedFix has a printed s-curve release liner
» MedFix EZ is linerless and perforated
» MedFix tapes are water resistant
» Gentac is transparent
» Gentac uses gentle and repositionable silicone adhesive
» Gentac tape is waterproof
» Pinc Tape is zinc based and adheres well even in moist conditions

PRODUCT SPOTLIGHT
Pinc™ Tape
» Pinc utilizes a zinc oxide adhesive
» Pinc tape is waterproof
» Pinc tape adheres well in moist environments
### ORDERING INFORMATION

**MEDFIX TAPE**  
Non-woven tape with S-curve liner

PRODUCT SPOTLIGHT
Prophase™ Wound Cleanser
» Contains PHMB as a preservative
» Low pH formulation
» Available in convenient 2-oz. squeeze bottle

WOUND CLEANSERS

RECOMMENDED USES
» Cleansing all types of wounds

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
To clean a wide variety of wounds including:
» Pressure injuries
» Partial- and full-thickness wounds
» Infected and non-infected wounds

CHANGE FREQUENCY
» With every dressing change

CONTRAINDICATIONS
» Patients with a known sensitivity to ingredients in the wound cleanser

ABOUT WOUND CLEANSERS
» Easy cleansing
» Adjustable trigger, PSI of 8.6 at 3”
» Within AHCPR guidelines
» MicroKlenz is antimicrobial
» Prophase contains PHMB as a preservative
ORDERING INFORMATION
To order by the bottle, add “H” to the end of the item number.

NE1®
Wound Assessment

RECOMMENDED USES
» Measure and assess all types of wounds

INDICATIONS
» Wound assessment to assist with wound evaluation

CHANGE FREQUENCY
» One time use, during each wound evaluation
» Upon admission and discharge at minimum

CONTRAINDICATIONS
» None

Clinical Highlight
The study showed a statistically significant improvement in wound assessment. Overall, the clinicians more than doubled their accuracy with the help of the NE1 Wound Assessment Tool.1

REFERENCES

ABOUT NE1
» Easy-to-use color-matching technique
» Reduces errors and promotes accurate wound assessment
» Standardizes wound documentation
» Free online education

THERAPEUTIC SUPPORT SURFACES

RECOMMENDED USES
» Pressure redistribution
» Friction reduction
» Shear reduction
» Heat distribution

ABOUT THERAPEUTIC SUPPORT SURFACES
» To provide solutions for the entire continuum of care, Medline offers a full line of pressure redistribution products for acute, long-term, and home care use.

ACUTE CARE
For more Information, see our Acute Care Support Surfaces Brochure (LIT58R)

THERATECH MATTRESS
Prevention through Treatment of Stage 2 Wounds
Resilient load-bearing cells independently conform to the body to redistribute pressure and reduce shear, while air channels reduce heat and moisture.

EQUALIZEAIRE MATTRESS
Prevention through Treatment of Stage 4 Wounds
The dynamic, self-adjusting non-powered mattress can become an alternating pressure mattress with the addition of the optional pump.

ADVANTAGE O.R. TABLE PAD
Prevention through Treatment of Stage 2 Wounds
Advanced surfaces optimize pressure redistribution during surgery on the O.R. table.

STRETCHER PADS
Prevention through Treatment of Stage 2 Wounds
Advanced surfaces optimize pressure redistribution during transportation to and from the operating room.

HEEL PROTECTION
Prevention through Treatment of Stage 4 Wounds
Innovative devices elevate the heels and significantly reduce pressure, friction and shear.
LONG-TERM CARE
For more information, see our Long-Term Care Support Surfaces Brochure (LIT162)

ADVANTAGE CONTOUR MATTRESSES
Prevention through Treatment of Stage 2 Wounds
The unique contour shape of the high-resiliency foam helps it to completely conform to the resident’s body and cradle high-risk areas and provide support.

POWERED MATTRESSES/OVERLAYS
Prevention through Treatment of Stage 4 Wounds
Choose from a wide variety of options for every major therapeutic modality, including alternating pressure, low air loss, true low air loss and self-adjusting therapies.

WHEELCHAIR CUSHIONS
Prevention through Treatment of Stage 4 Wounds
Wide selection of Medline-brand and popular name-brand cushions are specifically designed to meet the needs of residents.

HEEL PROTECTION DEVICES
Prevention through Treatment of Stage 4 Wounds
Medline’s top-quality heel protection devices elevate heels and significantly reduce pressure, friction, and shear.

HME DEALER
For more information, see our HME Dealer Support Surfaces Brochure (LIT459)

GROUP 1 TREATMENT PRODUCTS
Prevention through Treatment of Stage 2 Wounds
A variety of prevention products are specifically tailored to HME Dealers, including static air overlays, alternating-pressure overlays, gel overlays and therapeutic homecare mattresses.

GROUP 2 TREATMENT PRODUCTS
Treatment of Stages 2 through 4 & Surgical Wounds
A variety of treatment options cater to HME Dealers, including alternating pressure, low air loss, true low air loss and self-adjusting therapies.

WHEELCHAIR CUSHIONS/BEDSIDE SAFETY/ACCESSORIES
Prevention through Treatment of Stage 4 Wounds
A wide selection of Medline-brand and popular name-brand cushions are specifically designed to meet the needs of today’s HME Dealer.
Classification of Tissue Destruction in Pressure Injury

A pressure injury is localized damage to the skin and/or underlying soft tissue usually over a bony prominence or related to a medical or other device. The injury can present as intact skin or an open ulcer and may be painful. The injury occurs as a result of intense and/or prolonged pressure or pressure in combination with shear. The tolerance of soft tissue for pressure and shear may also be affected by microclimate, nutrition, perfusion, co-morbidities and condition of the soft tissue. NPUAP, 2016

**STAGE 1**

**Stage 1 Pressure Injury: Non-blanchable erythema of intact skin**
Intact skin with a localized area of non-blanchable erythema, which may appear differently in darkly pigmented skin.

Presence of blanchable erythema or changes in sensation, temperature, or firmness may precede visual changes. Color changes do not include purple or maroon discoloration; these may indicate deep tissue pressure injury.

**STAGE 2**

**Stage 2 Pressure Injury: Partial-thickness skin loss with exposed dermis**
The wound bed is viable, pink or red, moist, and may also present as an intact or ruptured serum-filled blister. Adipose (fat) is not visible and deeper tissues are not visible. Granulation tissue, slough and eschar are not present. These injuries commonly result from adverse microclimate and shear in the skin over the pelvis and shear in the heel. This stage should not be used to describe moisture associated skin damage (MASD) including incontinence associated dermatitis (IAD), intertriginous dermatitis (ITD), medical adhesive related skin injury (MARSII), or traumatic wounds (skin tears, burns, abrasions).

**STAGE 3**

**Stage 3 Pressure Injury: Full-thickness skin loss**
Full-thickness loss of skin, in which adipose (fat) is visible in the ulcer and granulation tissue and epibole (rolled wound edges) are often present. Slough and/or eschar may be visible. The depth of tissue damage varies by anatomical location; areas of significant adiposity can develop deep wounds. Undermining and tunneling may occur. Fascia, muscle, tendon, ligament, cartilage and/or bone are not exposed. If slough or eschar obscures the extent of tissue loss this is an Unstageable Pressure Injury.

**DEEP TISSUE PRESSURE INJURY (DTPI)**

Deep Tissue Pressure Injury: Persistent non-blanchable deep red, maroon or purple discoloration
Intact or non-intact skin with localized area of persistent non-blanchable deep red, maroon, purple discoloration or epidermal separation revealing a dark wound bed or blood-filled blister. Pain and temperature change often precede skin color changes. Discoloration may appear differently in darkly pigmented skin. This injury results from intense and/or prolonged pressure and shear forces at the bone-muscle interface. The wound may evolve rapidly to reveal the actual extent of tissue injury, or may resolve without tissue loss. If necrotic tissue, subcutaneous tissue, granulation tissue, fascia, muscle or other underlying structures are visible, this indicates a full-thickness pressure injury (Unstageable, Stage 3 or Stage 4). Do not use DTPI to describe vascular, traumatic, neuropathic, or dermatologic conditions.

**STAGE 4**

**Stage 4 Pressure Injury: Full-thickness skin and tissue loss**
Full-thickness skin and tissue loss with exposed or directly palpable fascia, muscle, tendon, ligament, cartilage or bone in the ulcer. Slough and/or eschar may be visible. Epibole (rolled edges), undermining and/or tunneling often occur. Depth varies by anatomical location. If slough or eschar obscures the extent of tissue loss this is an Unstageable Pressure Injury.

**UNSTAGEABLE**

Unstageable Pressure Injury: Obscured full-thickness skin and tissue loss
Full-thickness skin and tissue loss in which the extent of tissue damage within the ulcer cannot be confirmed because it is obscured by slough or eschar. If slough or eschar is removed, a Stage 3 or Stage 4 pressure injury will be revealed. Stable eschar (i.e. dry, adherent, intact without erythema or fluctuance) on an ischemic limb or the heel(s) should not be removed.
SKIN HEALTH HOTLINE MANAGED BY WOUND CARE NURSE SPECIALIST

An important number to remember is 1-888-701-SKIN (7546) because it reaches our Skin Health Hotline, managed by board-certified wound care nurses. The nurses are available to answer questions about product usage such as application and appropriateness of a dressing for a particular wound condition.

The Skin Health Hotline is staffed Monday through Friday from 8 am to 5 pm Central Time.

PRODUCT SUPPORT AT www.medline.com/advancedwoundcare

Medline’s website is another way to get up-to-date product information. You will find application videos for all of our advanced wound care products at www.medline.com/awcvideos. The interactive product selector can also help you choose the best product based upon the wound conditions.

MORE THAN 80 WOUND AND SKIN CARE PRODUCT SPECIALISTS

Receiving support from one of Medline’s 80+ wound care product specialists has never been easier. The wound care product specialists are devoted to supplying you with appropriate wound care products, services and educational support. This team is highly trained and available to deliver on-site, face-to-face in-servicing for your staff.

CUSTOMIZED PRODUCT RECOMMENDATIONS AT YOUR FINGERTIPS

The Skin Health Product Selector App provides customized product recommendations based on the wound condition and your formulary. It’s never been easier to ensure your staff has the educational and clinical information they need at their fingertips.

For more information, see www.medline.com/advancedwoundcare or contact your sales specialist.
EDUCATIONAL PACKAGING

Many nurses find themselves in situations on a daily basis where valuable time is wasted searching for the right dressing. Often the wrong dressing is used or the dressing is not used properly. By listening to you, Medline has found a way to improve this process and ensure that nurses have the information they need. It is called Educational Packaging. The package focuses on patient safety and correct product application. Each package serves as a 2-Minute Course on Wound Care™.

Often, a dressing’s box and product insert never leaves a supply room or closet. For that reason, Medline leverages Educational Packaging to provide bedside support to the nurse, the patient, and the family.

Education is essential for clinicians as well as for their patients and their families. Ensuring that patients and caregivers are taught the expected outcomes and the plan to achieve them is vital for successful wound treatment.
MEDLINE UNIVERSITY®

Medline University offers continuing education programs and accredited continuing nursing education opportunities. We offer a wide array of educational opportunities on topics that are current and relevant to your staff. The courses are presented in an online format so you can take them at your convenience. All you need is a connection to the internet! The course content, test and CE certificate are online. Visit our Web site www.medlineuniversity.com for more information.

» Free access to 250 clinical courses approved for continuing education credit by nationally recognized boards of nursing
» Keep track of all your Medline University CEs and other CEs in one convenient place
» Easy-to-use website, with no app required

And it’s all absolutely FREE!
