Buddy the Brave® Pediatric Urology System
Kid-friendly Products for Standardizing Clinician Practice and Reducing Pediatric CAUTI
UP UNTIL NOW, YOU’VE HAD TO MAKE DO WITH ADULT UROLOGICAL PRODUCTS.

Medline asked experts in pediatric care how we could help them reduce catheter-associated urinary tract infections (CAUTI), standardize best practices and better serve their youngest catheter patients. Here’s what we learned:

PROBLEM

Selecting the Right Products for Foley Catheterization in Pediatric Patients

With few true pediatric solutions, clinicians must pull catheterization components separately, making more work for the clinician and reducing standardization in practice. Following CDC recommendations¹, closed system trays have become a new alternative to this practice, but even these trays pose problems, as it is difficult with pediatric patients, especially infants, to choose the correct catheter and correctly place the catheter each time.

SOLUTION

The First Pediatric Add-a-Catheter System*¹

In response, Medline has created the first pediatric add-a-catheter system available in the North American market. Part of our ERASE CAUTI® program, this groundbreaking system includes an add-a-catheter tray containing all the supplies to prepare for aseptic catheter insertion and a Foley and sterile water syringe kit. By pulling two kits, clinicians can easily select the proper supplies for aseptic insertion. This also allows several catheter choices to be available—but unopened—at the bedside, minimizing waste.

* Based on a review of top competitor offerings in the US market.
**PROBLEM:**
Lack of Urology Products for Pediatric Patients
Many pediatric facilities use adult urological products, causing extra work for caregivers and making it nearly impossible to standardize practice.

**SOLUTION:**
Medline’s patented one-layer Add-A-Catheter tray** for children. The pediatric-specific components include:

- **Exact Measure Urine Meter** has one-milliliter graduations for easy and accurate reading of output quantity. It features an exclusive slide tap drainage port and 60 inches of tubing to facilitate drainage.
- **New CSR wrap with enhanced drape-ability** makes it easier to open the tray on a bedside table.
- **Age-appropriate education card** offers helpful procedure information for parents and fun activities and bravery sticker for patients.

**PROBLEM**
Inappropriately Sized Securement Device
Securement devices for pediatric Foley catheters are sized for adults not children.

**SOLUTION**
Child-Sized Securement Device
Features Buddy the Brave
Our innovative pediatric securement device is sized specifically for children and sports Buddy the Brave lion cub on it. It’s available single sterile and in the ERASE CAUTI tray. In compliance with CDC guidelines, this low-profile device is designed to minimize urethral traction and be gentle to skin.

**PROBLEM**
Risk of Foley Catheter Over Inflation
Standard Foley catheter kits used in pediatric care contain 10 ml of sterile water—at least double what’s actually needed for 6, 8 and 10 Fr catheters. This results in confusion and inflation issues.

**SOLUTION**
Pediatric Catheter Bundled with Correct Amount of Sterile Water
Our pediatric Foley catheters now come packaged with precisely enough sterile water for full inflation—3 ml for 6 Fr catheters and 5 ml for 8 and 10 Fr catheters.

Sometimes you just need a Buddy.
Designed with pediatric patients in mind, Buddy can help reduce some of the fear and anxiety around catheterization.

**PROBLEM**
Inappropriately Sized Securement Device
Securement devices for pediatric Foley catheters are sized for adults not children.

**SOLUTION**
Child-Sized Securement Device
Features Buddy the Brave
Our innovative pediatric securement device is sized specifically for children and sports Buddy the Brave lion cub on it. It’s available single sterile and in the ERASE CAUTI tray. Pediatric Securement Device
- DYND7600P: Pediatric Securement Device - 100/cs

Pediatric Urine Meter
- DYND7407L: Urine Meter, 200 ml, Luer Lock, 60 in. Tubing - 10/cs

Closed System ERASE CAUTI Foley Trays
- DYND160806: 6 Fr 1.5 ml 100% Silicone Foley Catheter Pre-connected to 200 ml Urine Meter with 2,000 ml Drain Bag - 10/cs
- DYND160808: 8 Fr 3 ml 100% Silicone Foley Catheter Pre-connected to 200 ml Urine Meter with 2,000 ml Drain Bag - 10/cs
- DYND160810: 10 Fr 3 ml 100% Silicone Foley Catheter Pre-connected to 200 ml Urine Meter with 2,000 ml Drain Bag - 10/cs
- DYND160812: 12 Fr 10 ml 100% Silicone Foley Catheter Pre-connected to 200 ml Urine Meter with 2,000 ml Drain Bag - 10/cs
- DYND160808T: 8 Fr 3 ml Temperature Sensing Foley Catheter Pre-connected to 200 ml Urine Meter with 2,000 ml Drain Bag - 10/cs
- DYND160810T: 10 Fr 3 ml Temperature Sensing Foley Catheter Pre-connected to 200 ml Urine Meter with 2,000 ml Drain Bag - 10/cs

Innovative Products
Medline offers a comprehensive line of nurse-designed urology products that specifically satisfy pediatric needs.

Clinical Support
Clinicians are available to troubleshoot, educate and perform audits to supplement CAUTI reduction initiatives. Contact your Medline representative for more information.

Education Program
Medline’s ERASE CAUTI Program provides a comprehensive strategy for CAUTI elimination through education, awareness and products.

Contact your Medline representative, call 1-800 MEDLINE or go to www.medline.com for more information.
