medline.com/advancedwoundcare
Available 8am – 5pm Central Time
DRIVEN TO HEAL.

Effectively managing chronic wounds requires you to look at things differently and challenge the status quo. Medline’s mission is to help you rise to the challenge by offering the broadest range of advanced wound care products in the industry and delivering a comprehensive package of educational resources. This approach ensures your facility has the tools and expertise to tackle difficult-to-heal chronic wounds.

Seeing Things Differently
Medline has a long history of rapid innovation in wound care with no intention of slowing down. The challenges you face in managing chronic wounds drive us to develop new solutions, positively affecting the quality and efficiency of care.

Medline’s Latest Innovations
- Hyalomatrix® hyaluronic acid based wound device
- TheraHoney® honey wound dressings
- Opticell® with Chytoform technology
- Optifoam® Gentle superabsorbent foam with silicone face and border

NOTES
EMPOWERING CLINICIANS THROUGH CUSTOMIZED SUPPORT.

Medline’s educational resources provide you with the support to raise the standard of care. As our valued customer, we invite you to review the resources available with your Medline representative to develop a unique support plan tailored to your needs.

» **Advanced Wound & Skin Care Product Specialists**
  Medline product specialists are trained to help you optimally leverage the support Medline offers as you strive to enhance quality of care.

» **Educational Packaging**
  Medline’s award-winning educational packaging ensures that caregivers have complete step-by-step instructions for use at their fingertips.

» **Medline University**
  Medline University empowers you to take, assign, and track progress on free online courses designed to enhance expertise.

» **Skintegrity Program**
  A premium suite of products, educational resources and support tools that assist you in tracking outcomes and measuring improvement.

» **Educare Hotline**
  The Educare hotline allows access to a board-certified wound care nurse from 8am–5pm Central Standard Time Monday–Friday. **1-888-701-SKIN (7546)**

» **The NE1 Wound Assessment Tool**
  This proprietary wound assessment tool is designed to dramatically increase accuracy, consistency and transparency in wound assessment.

» **WoundRounds® Wound Management System**
  This unique wound management system allows long-term care facilities to streamline and enhance their wound care processes.

» **Wound & Skin Care Guidelines**
  Medline offers clinical support in helping you determine and communicate your treatment guidelines.

» **Online Product Application Videos**
  A complete library of instructional application videos helps train new staff on proper product application.
  Visit: [www.medline.com/advancedwoundcare](http://www.medline.com/advancedwoundcare) and see how products are applied.

» **Advanced Wound & Skin Care Pocket Reference Guide**
  This compact booklet contains a wealth of clinical and product information. Designed to be used by caregivers as a reference tool.
DIMES – YOUR WOUND CARE NAVIGATOR

DIMES – FOR SUCCESSFUL CHRONIC WOUND CARE

Wound care professionals face diverse and complex challenges. That’s why Medline offers a wide variety of products and programs that help clinicians deliver world-class care tailored to any given clinical context.

Throughout this catalog, you’ll find evidence-based products*, information and resources, all organized around the DIMES system of wound bed preparation and treatment.

*Contact Medline Industries, Inc. for data related to the products mentioned herein.
**D**
Debridement (Autolytic)
The removal of nonviable tissue by creating an optimal moist wound environment.

8 TheraHoney®
12 TenderWet® Active

**I**
Infection/Inflammation
Addressing bioburden and inflammation in the wound.

16 Opticell® Ag+
20 Maxorb® Extra Ag+
22 Optifoam® Gentle Ag+
24 Optifoam® Ag+
26 Optifoam® Ag+ Post-Op Strip
28 Silvasorb®
30 Argiaes® Powder

**M**
Moisture Balance
Achieving and maintaining moisture balance in and around the wound.

34 Optifoam® Gentle
38 Optifoam®
40 Opticell®
42 Qwick™
44 Optilock®
46 Maxorb®
48 Exuderm®
50 Hydrogel Dressings

**E**
Edge/Environment
Treating stalled wounds where epithelium fails to migrate.

54 Hyalomatrix®
58 Puracol®

**S**
Support Products, Services and Education
Products that complement DIMES but do not fit into one of the other categories.

62 Marathon®
66 Sureprep®
68 CoFlex® TLC
72 Fourflex and Threeflex®
74 Medigrip™
76 Unna-Z®
78 Versatel® and Versatel One
80 Cover Dressings
82 Suresite®
84 Dressing Fixation Tapes
86 Wound Cleansers
88 NE1®
The first step in wound healing is the removal of necrotic tissue that can impede the growth and proliferation of healthy granulating tissue.
The sweet science of honey...

Made with 100% sterile, medical-grade Manuka honey, TheraHoney is a powerful agent in promoting natural autolytic debridement. Its high sugar levels (87%) encourage osmotic activity that helps clear away necrotic tissue, maintain a moist wound environment conducive to healing, and reduce wound odor. Studies show Manuka honey dressings can also significantly lower wound pH and help reduce wound size.¹

...and the sweet results it can bring

The use of Manuka honey dressings is associated with a statistically significant decrease in wound pH and a reduction in wound size.¹
“Honey is a very effective [AUTOLYTIC DEBRIDEMENT] agent, well accepted by patients, readily available, inexpensive, and with additional activities which are of benefit.”

2Dr. Peter Molan, Honey Research Unit, Department of Biological Sciences, University of Waikato, Hamilton, New Zealand.

The illustration depicts Manuka honey drawing exudate from subcutaneous tissue to the wound surface, removing debris, slough and necrotic tissue.
**THERAHONEY®**

100% Medical-Grade Manuka Honey

**RECOMMENDED USE**
- All wound depths
- All drainage levels
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam Gentle
- OptiLock
- Qwick™

**INDICATIONS**
- Partial- and full-thickness wounds
- Leg ulcers
- Pressure injuries
- First- and second-degree burns
- Diabetic foot ulcers
- Surgical and trauma wounds
- Minor abrasions, lacerations, and cuts
- Minor scalds and burns

**CHANGE FREQUENCY**
- TheraHoney may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns
- Individuals with a known sensitivity to honey or bee venom

**ABOUT THERAHONEY**
- Made of 100% medical-grade honey (Leptospermum scoparium)
- Promotes autolytic debridement via high sugar levels (87%)\(^1\)\(^3\)\(^4\)
- Helps rapidly reduce odor\(^2\)\(^4\)
- Creates a moist wound-healing environment\(^4\)
- Should be paired with an absorbent dressing\(^5\)
- Compatible with silver dressings and wound cleanser surfactants\(^6\)

**DID YOU KNOW?**
TheraHoney draws fluid from the wound bed, encouraging autolytic debridement. Use Qwick in conjunction with TheraHoney for optimal absorbency. For more information on Qwick, see pg. 42.

TENDERWET® ACTIVE
Polyacrylate Gel Pad

RECOMMENDED USE
» All wound depths
» All drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Bordered gauze
» Stratasorb® Composite

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Diabetic ulcers
» Surgical wounds

» Lacerations and abrasions
» Skin tears
» First- and second-degree burns

CHANGE FREQUENCY
» TenderWet Active may be left in 24 hours
» Change frequency will depend on the amount of drainage

CONTRAINDICATIONS
» Do not apply topical medication or disinfectant during treatment of Tenderwet Active

ABOUT TENDERWET ACTIVE
» Solution is released as exudate is absorbed, providing an autolytic debriding process
» Absorbs and retains microorganisms
» Uses physiologically-compatible Ringer’s solution
» More effective than wet gauze therapy
» Will not stick to wound bed, which helps ease the pain of dressing changes
» Cost-effective
» Helps create an ideal moist healing environment
» High fluid retention
» Easy application and removal

TenderWet provides a moist wound environment to help promote autolytic debridement of necrotic tissue.

DEBRIDEMENT
Potentially harmful microorganisms contaminate nearly all wounds. Actively managing bioburden and infection risk is key to effective wound management.

**OPTICELL® Ag+**

Antimicrobial Chitosan-Based Gelling Fiber

**HARNESSING THE POWER OF THE OCEAN.**

Opticell Ag+ utilizes Chytoform, Medline’s chitosan-based gelling fiber technology to deliver excellent benefits to wounds. Opticell Ag+ is highly absorbent and can be moistened to address dry or lightly draining wounds.

Opticell Ag+ delivers broad spectrum antimicrobial efficacy without harming skin cells (noncytotoxic).
AN OPTIMAL HEALING ENVIRONMENT.

Opticell Ag+ is highly conformable and retains its shape and size in the wound better than other gelling fibers. This quality ensures that the Opticell Ag+ dressing remains in optimal and complete contact with the wound even as it absorbs moisture.

Opticell with Chytoform technology

Competition (Stitched Gelling Fiber)

The smooth, thin and conformable profile provides for intimate contact with the wound. The ridges in the dressing may lead to an uneven wound contact surface.

ABSORPTION STUDY RESULTS

Opticell’s exceptional absorption capability helps reduce dressing change frequency and limit maceration.

Based on in vitro testing, Opticell had the highest average absorbency of the three dressings tested.
OPTICELL® Ag+
Antimicrobial Chitosan-Based Gelling Fiber

RECOMMENDED USE
» All wound depths
» All drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» Bordered gauze
» Stratasorb® Composite

INDICATIONS
» Partial- and full-thickness wounds
» Venous stasis ulcers
» Pressure injuries/ulcers
» First- and second-degree burns
» Diabetic foot ulcers
» Surgical wounds
» Trauma wounds
» Donor sites
» Arterial ulcers and leg ulcers of mixed etiology

CHANGE FREQUENCY
» May be left in place for up to 7 days
» Dressing change frequency will depend on the amount of drainage

CONTRAINDICATIONS
» Individuals with a sensitivity to silver or chitosan, which is derived from shellfish
» Third-degree burns

IN VITRO ANTIBACTERIAL EFFICACY OF OPTICELL Ag+
Opticell Ag+ has been shown to effectively kill microorganisms for up to 7 days, including:¹
» Methicillin-resistant Staphylococcus aureus (MRSA) ATCC 33591—gram positive bacteria
» Escherichia coli ATCC 8739—gram negative bacteria
» Pseudomonas aeruginosa ATCC 9027—gram negative bacteria
» Candida albicans ATCC 10231—yeast
» Vancomycin-resistant Enterococcus faecium (VRE) ATCC 51575—gram positive bacteria
» Staphylococcus aureus ATCC 6538—gram positive bacteria

ABOUT OPTICELL Ag+
» Chytoform™ gelling fiber technology
» Broad spectrum antimicrobial ionic silver
» Highly conformable
» Versatile – can be used with all drainage levels
» Three times the wet strength of Aquacel® traditional gelling fiber¹
» No lateral wicking – limits maceration
» Highly absorbent¹
» Maintains a moist wound-healing environment
» Surface area memory (SAM) – retains its size
» Gentle removal from the wound
» Designed to minimize pain during removal

MANAGE PAIN AT THE DONOR SITE

What’s Inside?
Chytoform is the chitosan-based gelling fiber technology inside Opticell. Chitosan is derived from shellfish, bringing the science of the ocean to wound care.
MAXORB® EXTRA Ag+
Antimicrobial CMC/Alginate Dressings

RECOMMENDED USE
» All wound depths
» Moderate to heavy drainage levels
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Optifoam® Gentle
» Stratasorb® Composite
» Bordered gauze

INDICATIONS
» Pressure injuries
» Leg ulcers
» First- and second-degree burns
» Moderate to heavily draining partial- and full-thickness wounds
» Diabetic foot ulcers
» Surgical wounds
» Graft and donor sites
» Trauma wounds

CHANGE FREQUENCY
» Maxorb Extra Ag+ may be left in place for up to 21 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Dry or lightly draining wounds
» Patients with a known sensitivity to alginate or silver
» To control heavy bleeding
» As a surgical implant

MODIFIED ASEPSIS INDEX
Asepsis index is a measure of 10 wound healing parameters. A lower score is preferable.

ABOUT MAXORB Ag+
» Helps manage bacterial burden
» Controlled-release ionic silver
» Cost-effective
» Easy dressing changes
» Highly absorbent
» Reduces odor
» Fluid will not wick laterally
» Up to 21-day antimicrobial protection
» Reinforced silver CMC/alginate ribbon
» Ribbon is ideal for tunneling or undermining wounds

OPTIFOAM® GENTLE Ag+
Antimicrobial Silicone Foam Dressings

RECOMMENDED USE
» All wound depths*
» All wound drainage levels
» As a primary or secondary dressing

RECOMMENDED SECONDARY DRESSINGS**
» Gentac™ tape
» Elastic net
» Medigor™ Tubular Bandage

*May be used as a secondary dressing for deep wounds
**Only non-bordered dressings require a secondary dressing

INDICATIONS
» Pressure injuries
» Partial- and shallow full-thickness wounds
» Surgical wounds
» Wounds with colonization
» Leg ulcers
» Diabetic foot ulcers
» Donor sites
» Lacerations and abrasions
» Skin tears
» First- and second-degree burns

CHANGE FREQUENCY
» Optifoam Gentle Ag+ may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Lesions with active vasculitis
» Individuals with a known sensitivity to silver

ABOUT OPTIFOAM GENTLE Ag+
» Silicone dressing provides gentle adhesion
» Highly conformable¹
» Moisture vapor transmission rate (MVTR) adjusts to fluid level
» Ionic silver provides an antimicrobial barrier¹
» Continuous antimicrobial barrier protection¹
» Helps maintain a moist wound-healing environment
» Waterproof outer layer
» Highly absorbent¹
» Non-staining
» Low friction and shear outer layer

**INDICATIONS**
- Incision sites

**CHANGE FREQUENCY**
- Optifoam Ag+ Post-Op Strip may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**CONTRAINdications**
- Third-degree burns
- Lesions with active vasculitis
- Individuals with a known sensitivity to silver

**ABOUT OPTIFOAM Ag+ POST-OP**
- Ionic silver provides antimicrobial barrier\(^1\) over incision sites
- Continuous antimicrobial protection\(^1\)
- Thin, conformable adhesive border
- Can manage repeated bacteria introduction
- Non-staining
- Silicone adhesive border (only for Optifoam Gentle Ag+ Post-Op)

**DID YOU KNOW?**
Sureprep® Rapid Dry skin protectant ensures proper adhesion and removal of Optifoam Ag+ Post-Op Strip. For more information about Sureprep® Rapid Dry, see pg. 66.

4 hrs. at 37°C exposure to 4 sq cm of each dressing
10⁸ - 10⁹ Colony Forming Units (CFUs) initial population

COMPARATIVE ANTIMICROBIAL EFFECT STUDY
Optifoam Ag+ has the least number of surviving colony forming units at 4 hours.
SILVASORB®
Antimicrobial Hydrogel Dressings

RECOMMENDED USE
» All wound depths
» Light to moderately draining wounds
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Stratasorb® Composite
» Bordered gauze
» Optifoam® Gentle

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Diabetic foot ulcers
» Graft wounds and donor sites

» Skin tears
» Surgical wounds
» Lacerations and abrasions
» First- and second-degree burns

CHANGE FREQUENCY
» Amorphous gel may be left in place for up to 3 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Individuals with a known sensitivity to silver

ABOUT SILVASORB
» Helps manage bacterial burden\textsuperscript{1,2}
» Ionic Silver
» Continuous antimicrobial protection\textsuperscript{3}
» Non-staining\textsuperscript{1}
» Gentle for the patient\textsuperscript{4,5}
» Advanced fluid management\textsuperscript{1}
» Extended wear time\textsuperscript{3,4,7}

SURVIVAL CURVE WITH SILVASORB\textsuperscript{1}
SilvaSorb has powerful antimicrobial activity (in vitro), 6–8 log reduction within four hours.
ORDERING INFORMATION

SILVASORB GEL
For lightly draining wounds in need of an antimicrobial barrier.

References
**ARGLAES® POWDER**
Antimicrobial Powder

**RECOMMENDED USE**
- All wound depths
- Light to heavily draining wounds
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Stratasorb® Composite
- Bordered gauze
- Suresite® 123+Pad

**INDICATIONS**
- Pressure injuries
- Diabetic foot ulcers
- Partial- and full-thickness wounds
- Leg ulcers
- Negative pressure wound therapy

**CHANGE FREQUENCY**
- Arglaes Powder may be left in place for up to 5 days
- Dressing change frequency will depend upon the amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns
- Patients with a known sensitivity to silver
- As a surgical implant
- Do not use topical antibiotics in conjunction with Arglaes

**ABOUT ARGLAES POWDER**
- Manages bacterial burden
- Continuous antimicrobial protection
- Extended wear time
- Non-staining
- Can convert other dressings to aid in an antimicrobial reduction

**INDICATIONS**
- Pressure injuries
- Diabetic foot ulcers
- Partial- and full-thickness wounds
- Leg ulcers
- Negative pressure wound therapy

**CHANGE FREQUENCY**
- Arglaes Powder may be left in place for up to 5 days
- Dressing change frequency will depend upon the amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns
- Patients with a known sensitivity to silver
- As a surgical implant
- Do not use topical antibiotics in conjunction with Arglaes

**ABOUT ARGLAES POWDER**
- Manages bacterial burden
- Continuous antimicrobial protection
- Extended wear time
- Non-staining

SUSTAINED-RELEASE

Staphylococcus aureus
Greater than 90% reduction in viable bacterial numbers after 48 hours.

Escherichia coli
Greater than 90% reduction in viable bacterial numbers after 48 hours.

Fecal streptococcus
Greater than 90% reduction in viable bacterial numbers after 48 hours.

Powerful antimicrobial activity – up to a 6 log reduction (in vitro studies)

Independent study performed by Wickham Laboratories Limited, Hampshire, England

References
Achieving the right moisture balance can be a challenge. Too much moisture can lead to periwound maceration and skin breakdown, while too little moisture can impede cellular activities and promote eschar formation, resulting in poor wound healing.

ABSORBENT AND MOISTURE-DONATING PRODUCTS HELP ENSURE AN OPTIMAL WOUND-HEALING ENVIRONMENT.
Optifoam Gentle helps ease the pain and trauma of dressing changes. Featuring a specially-formulated silicone adhesive that helps keep it in place, Optifoam’s absorbent foam dressing retains fluid, protects against infection, and helps prevent shear and friction.
Studies in the evaluation of the use of a foam dressing with silicone border on patients at risk for HAPU resulted in a significant reduction in pressure ulcers over a 3-month period with lower monthly incidence and enhanced prevention.1

**OPTIFOAM® GENTLE**

**Foam Dressings**

**RECOMMENDED USE**
- All wound depths*
- All wound drainage levels
- As a primary or secondary dressing
  *May be used as a secondary dressing for deep wounds

**RECOMMENDED SECONDARY DRESSINGS†**
- Gentac Tape
- Elastic net
- Medigrip Tubular Bandage
  †Applies to Optifoam Silicone Faced Foam only

**INDICATIONS**
- Pressure injuries
- Partial- and full-thickness wounds
- Leg ulcers
- Donor sites
- Lacerations and abrasions
- Skin tears
- First- and second-degree burns

**CHANGE FREQUENCY**
- Optifoam Gentle may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
- Third-degree burns

**ORDERING INFORMATION**
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

**SILICONE FACED FOAM AND BORDER DRESSING WITH LIQUITRAP™ CORE**
Superabsorbent Liquitrap core draws in and retains large amounts of exudate.

References

**ABOUT OPTIFOAM GENTLE**
- Silicone adhesive provides gentle adhesion
- Highly conformable dressing can be lifted and reapplied
- Moisture vapor transmission rate (MVTR) adjusts to fluid level
- Highly absorbent!
- Helps create ideal healing environment
- Waterproof outer layer protects wound and keeps bacteria out
- Low friction and shear outer layer

**OPTICELL®**
Chitosan-Based Gelling Fiber

**RECOMMENDED USE**
» All wound depths
» All drainage levels
» As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
» Optifoam® Gentle
» Bordered gauze
» Stratasorb® Composite

**INDICATIONS**
» Partial- and full-thickness wounds
» Venous stasis ulcers
» Pressure injuries
» First- and second-degree burns
» Diabetic foot ulcers
» Surgical wounds

» Trauma wounds
» Donor sites
» Arterial ulcers and leg ulcers of mixed etiology
» Oncology wounds

**CHANGE FREQUENCY**
» Opticell® may be left in place for up to 7 days
» Opticell may remain in place up to 14 days in the context of burn treatment
» Dressing change frequency will depend on the amount of drainage

**CONTRAINDICATIONS**
» Third-degree burns
» Individuals with a sensitivity to chitosan, which is derived from shellfish

**SURFACE AREA MEMORY (SAM) RESULTS**

Retains its shape and size to maintain complete wound coverage.¹

**ABOUT OPTICELL**
» Chytoform™ gelling fiber technology
» Highly conformable
» Versatile – can be used for all drainage levels
» Three times as strong as traditional Aquacel¹
» No lateral wicking – limits maceration
» Highly absorbent¹
» Maintains a moist wound-healing environment
» Surface area memory (SAM) – retains its size
» Gentle removal from the wound
» Controls minor bleeding
» Designed to minimize pain upon removal

¹Surfaces Area Memory (SAM) results

Aquaconductive Technology
Aquaconductive Technology is the mechanism by which the three layers of Qwick wound dressing pull exudate away from or out of the wound to help create an optimal, moist wound-healing environment.

The storage layer consists of superabsorbent polyacrylate fibers designed to absorb and retain large amounts of exudate.

The wound contact layer is composed of a blend of hydrophobic and hydrophilic fibers. Hydrophobic fibers attract the exudate, resulting in fast wicking. Hydrophilic fibers regulate and channel absorption to facilitate vertical transfer of the exudate from the wound into the storage layer of Qwick.

The blue layer is the top layer, which faces away from the wound and helps serve as an indicator of how the dressing should be applied. This layer is not occlusive, and exudate can pass through it into a secondary dressing.
OPTILOCK®
Superabsorbent Dressings

RECOMMENDED USE
» All wound depths*
» Moderate to heavy drainage
» As a primary dressing
*As a secondary dressing for deep wounds

RECOMMENDED SECONDARY DRESSINGS
» Medfix™ Tape
» Elastic net
» Gentac® Tape
» CoFlex® TLC Two Layer Compression System

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Lacerations and abrasions
» Wounds under compression

CHANGE FREQUENCY
» OptiLock may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Individuals with a known sensitivity to the product itself or its components

ABOUT OPTILOCK
» Superabsorbent polymer core
» Locks in drainage under compression
» Adjusts absorption to the amount of drainage
» Protects skin from maceration
» Non-adherent wound contact layer

DID YOU KNOW?
OptiLock is ideal for highly draining venous leg ulcers because of its gentle contact layer and fluid-locking feature. Even under high compression bandages, the fluid is retained in the dressing. Use OptiLock in conjunction with CoFlex TLC compression bandage system. To learn more, see pg. 68.
OPTILOCK SUPERABSORBENT DRESSING
Non-adherent and superabsorbent.

OptiLock Absorbs and Retains More Fluid
In manufacturer’s laboratory testing, Medline’s OptiLock dressings outperformed a leading silicone-faced foam dressing. OptiLock’s remarkable absorption and fluid retention capabilities raise the bar for gentle wound care.

OptiLock absorbs approximately three times more fluid than a leading silicone-faced foam dressing.

OptiLock dressings retain substantially more fluid under compression than a leading silicone-faced foam dressing.

MAXORB®
Alginates

**RECOMMENDED USE**
» All wound depths
» Moderate/heavy drainage
» As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
» Optifoam® Gentle
» Bordered gauze
» Stratasorb® Composite

**INDICATIONS**
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Diabetic ulcers
» Surgical wounds
» Donor sites
» Lacerations and abrasions
» First- and second-degree burns

**CHANGE FREQUENCY**
» May be left in place for up to 7 days
» Dressing change frequency will depend on the amount of drainage

**CONTRAINDICATIONS**
» Individuals with a known sensitivity to alginates
» Third-degree burns
» To control heavy bleeding
» As a surgical sponge
» Dry or lightly draining wounds

**ABOUT MAXORB**
» Maxorb is a 100% alginate dressing
» Maxorb Extra is a blend of CMC and alginate fibers
» Maxorb ES is reinforced for easy removal from tunneling wounds
» Superior fluid handling
» High wet strength—removes in one piece
» Fluid does not wick laterally
» Improved gelling capability

HYDROGEL DRESSINGS
Hydrogels, Hydrogel Impregnated Gauze, and Hydrogel Sheets

RECOMMENDED USES
» All wound depths
» No/minimal drainage
» As a primary dressing

RECOMMENDED SECONDARY DRESSINGS
» Stratasorb® Composite
» Bordered gauze
» Suresite® 123+Pad

INDICATIONS
» Pressure injuries
» Partial- and full-thickness wounds
» Leg ulcers
» Surgical wounds

» Lacerations, abrasions and skin tears
» First- and second-degree burns

CHANGE FREQUENCY
» Skintegrity may be left in place for up to 3 days
» Derma-Gel may be left in place for up to 5 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Patients with a known sensitivity to components of the gel
» Heavily draining wounds

ABOUT HYDROGELS
» Donates moisture
» Rinses easily from the wound
» Skintegrity 1-oz. bellows bottle reduces waste and eases application
» Hydrogel Impregnated Gauze combines gauze with hydrogel for easy application
» Carrasyn Hydrogel available in an 8-oz. spray bottle

If the wound edge is not migrating after appropriate wound bed preparation (debridement, infection/inflammation, moisture balance) and healing is stalled, then advanced therapies should be considered.
Look inside...

Hyalomatrix®  54
Puracol®  58
ACTIVATE HEALING NATURALLY.

Inspired by the remarkable wound healing properties of hyaluronic acid (HA) in the fetal environment, Hyalomatrix features a uniquely long-lasting form of HA called HYAFF. Through a process called esterification, HYAFF takes the normal 3-day wear time of natural HA and extends it to 14–21 days on average.

Along with HYAFF providing a scaffold for native wound healing cells, the HA provides both hydrodynamic and biological effects. These aid in cellular migration, capillary growth, dermal reconstruction, and spontaneous reepithelialization.

Top Ten Innovations award in Podiatry Today
WELL-ESTABLISHED.
WELL-DOCUMENTED.

The roles of HA, HYAFF and Hyalomatrix are supported by more than 800 peer-reviewed published papers.2

- 750+ exploratory research studies on HA
- 45 HYAFF technology studies
- 24 Hyalomatrix clinical studies

Transparent, semipermeable membrane protects the wound

Non-woven pad of HYAFF, esterified HA

Over time, HYAFF integrates with and is resorbed by the surrounding tissue

HYALOMATRIX®
Hyaluronic Acid Wound Device

RECOMMENDED WOUND CONDITIONS
» All wound depths
» All drainage levels
» Primary layer

RECOMMENDED SECONDARY DRESSINGS
» Versatel®
» Qwick™
» Optilock®
» Sterile adhesive strips

INDICATIONS
» Pressure, venous, diabetic ulcers
» Partial- and full-thickness wounds
» Chronic vascular ulcers
» Second-degree burns
» Tunneled/undermined wounds

Surgical wounds (donor sites/grafts, post-Mohs surgery, post-laser surgery, podiatric, wound dehiscence)
» Trauma wounds (abrasions, lacerations, second-degree burns, skin tears)
» Draining wounds

CHANGE FREQUENCY
» Removal of the silicone layer is recommended when the tissue underneath is healed, or ready for grafting, typically 14 to 21 days after application

CONTRAINdications
» Individuals with a hypersensitivity to hyaluronan and/or its derivatives and silicone

ABOUT HYALOMATRIX
» Bilayered, sterile, flexible and conformable wound device
» Non-woven pad comprised entirely of HYAFF®, esterified hyaluronic acid
» Semipermeable silicone membrane controls water vapor loss
» Biodegradable matrix acts as a scaffold for cellular colonization and capillary growth
» Facilitates ordered reconstruction of the dermal tissue
ORDERING INFORMATION
*To order by the each, add “H” to the end of the item number.

**HYALOMATRIX HYALURONIC ACID WOUND DEVICE**
Ideal for complex chronic wounds, burns, and surgical sites.

PURACOL®
Collagen Dressings

**RECOMMENDED WOUND CONDITIONS**
- All wound depths
- All drainage levels
- As a primary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Optifoam® Gentle
- Stratasorb® Composite
- Bordered gauze
- Optifoam® Adhesive

**INDICATIONS**
- Pressure, venous, diabetic ulcers
- Partial- and full-thickness wounds
- Ulcers caused by mixed vascular etiologies
- Donor sites and other surface wounds
- Abrasions
- Traumatic wounds healing by secondary intention
- Dehisced surgical wounds

**CHANGE FREQUENCY**
- Puracol Plus and Puracol Plus Ag+ may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**CONTRAINDICATIONS**
- Active vasculitis or patients with known sensitivity to collagen
- Puracol Plus Ag+ only: patients with known sensitivity to silver;
- Third-degree burns

**ABOUT PURACOL PLUS**
- 100% collagen with a high degree of nativity\(^1,2\)
- High gel integrity\(^3\)
- Helps promote a natural wound environment conducive to wound healing
- Biodegradable
- Can be used in combination with negative pressure wound therapy (NPWT)\(^4\)

**ABOUT PURACOL PLUS Ag+**
In addition to all the benefits of Puracol Plus:
- Ionic silver provides antimicrobial barrier\(^5,6\)
- Non-staining

**MICROSCOPIC VIEW**
The intact superstructure provides strong evidence that the nativity of the collagen triple helix is preserved.

**PURACOL PLUS MICROSCAFFOLD™**
The open porous structure increases the internal surface area for maximal interaction with wound fluids.
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

**PURACOL PLUS COLLAGEN**
Ideal for partial- and full-thickness wounds of all drainage levels.

INNOVATING SKIN PROTECTION WITH CYANOACRYLATE TECHNOLOGY

Marathon No-Sting Cyanoacrylate Skin Protectant provides a long-lasting, robust barrier that defends damaged or intact skin from breakdown caused by moisture, friction, shear, and adhesive stripping.

This technology bonds to the skin through the polymerization process, becoming an additional layer of skin that will wear off as the epidermis naturally renews.
TESTED AND PROVEN.

An independent study tested 12 subjects ages 60+ and compared how bare skin, skin with an application of MARATHON, and skin with an application of Cavilon® resisted exposure to a corrosive fluid (synthetic urine).

RESULTS:
Areas where MARATHON was applied showed better resistance after each of the five urine and wash-off cycles compared to the areas where Cavilon or no product at all were applied.

“Today was a teary moment when Marathon worked for my patient that uses duct tape. She no longer needs duct tape for her ostomy. Marathon is holding strong, and she is elated.”

—Carrie Dean RN, CWCN

MARATHON®
No-Sting Cyanoacrylate Skin Protectant

RECOMMENDED USES
» Protection from moisture-associated skin damage
» Protection from friction and shear
» Protection from adhesive trauma

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
Protects intact or damaged skin from:
» Body fluids
» Moisture
» Friction and shear
» Adhesive stripping

CHANGE FREQUENCY
» Up to 3 days, reapply as needed

CONTRAINDICATIONS
Do not apply directly to:
» Deep, open, bleeding, or chronic wounds
» Second- or third-degree burns
» Infected areas

ABOUT MARATHON
» Robust, flexible and long-lasting
» Non-stinging: contains no solvents or activators
» Protects from the effects of friction
» Protects from moisture-associated skin damage caused by urine, exudate, perspiration, and other body fluids
» Can be used on intact or damaged skin
» Fast drying
» Breathable
### ORDERING INFORMATION

**MARATHON NO-STING CYANOACRYLATE SKIN PROTECTANT**
For powerful skin protection.

SUREPREP®
Skin Protectant

RECOMMENDED USES
» Protection from corrosive fluids
» Protection from adhesive trauma

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
To be applied to intact or damaged skin in order to provide a primary barrier against:
» Bodily fluids
» Adhesive stripping

CHANGE FREQUENCY
» Up to 72 hours or with every dressing change

CONTRAINDICATIONS
» On infected areas of skin
» Near the eyes
» As the only covering in situations that require additional dressing protection from bacterial contamination/penetration, e.g., intravenous therapy catheter sites and full- or partial-thickness wounds

ABOUT SUREPREP
» Protects from adhesive stripping
» Safe for delicate skin
» Outperformed 3M Cavilon® in controlled study
» Fast drying
» Vapor permeable
» Creates a waterproof barrier on periwound skin
» Protection from friction and body fluids
» Transparent

Transepidermal Water Loss (TEWL)4

On day 4 and day 5, subjects using Sureprep No-Sting experienced significantly less water loss than subjects using 3M Cavilon No-Sting.

COFLEX® TLC
Two-Layer Compression Bandage System

CONSISTENT AND THERAPEUTIC COMPRESSION

The CoFlex TLC compression system manages venous insufficiency and associated edema by delivering 30-40 mmHg* of compression for up to 7 days. The first layer is soft, absorbent foam, specially designed to wick away moisture and control odor. Layer two is a short stretch cohesive bandage that provides therapeutic compression levels and holds the first layer in place.

THERAPEUTIC COMPRESSION

CoFlex TLC consistently delivers 30–40 mmHg* of compression for up to 7 days.

*Source: Andover Healthcare Study #1306-A. Data on file. Actual compression delivered will partially depend on limb circumference and application technique, and therefore vary between patients.
WHAT’S INSIDE

» Absorbent padding bandage – with odor control.
» Cohesive compression bandage – tears by hand for easier application.
» Knee-high stocking – helps patients comply with compression therapy; comfortable and discreet under clothing and shoes.
» Extra-large bandage – 35% longer to fit easily over edematous limbs.
» Patient education card – explains compression therapy and encourages patients to follow the healthcare provider’s instructions.
» Medline Educational Packaging™ – easy-to-follow application instructions right on the box.
COFLEX® TLC
Two-Layer Compression System

RECOMMENDED USES
» Venous leg ulcers

RECOMMENDED SECONDARY DRESSINGS
» No secondary dressing is required

INDICATIONS
» To deliver therapeutic compression to manage venous disease and associated edema

CHANGE FREQUENCY
» CoFlex® TLC compression system may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Patients with severe arterial disease

ABOUT COFLEX TLC
» Colfex TLC Lite provides 20–30 mmHg of therapeutic compression
» Colfex TLC provides 30–40 mmHg of therapeutic compression
» Low-profile system easily fits under clothing and footwear
» Absorbent padding bandage designed to wick away moisture and control odor
» Stocking included to ease movement
» Cohesive layer tears by hand
» Patient information card included in every kit
» Extra-long kit available for larger legs
» Easy and consistent application method

Amount of Water Absorbed†

Absorption prior to runoff. Error bars represent the 95% confidence interval. P-value obtained from a one-tailed, paired t-test.

MEDIGRIP™
Elasticated Tubular Bandages

RECOMMENDED USES
» Dressing Retention
» Light compression

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Edema
» Treatment of chronic venous insufficiency
» Dislocations
» Sprains
» As a retention dressing

CHANGE FREQUENCY
» Medigrip may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» None*

ABOUT MEDIGRIP
» Provides excellent support for joints
» Easy to apply and reapply
» Wide range of applications
» Good for securing dressings
» Can be used as mild compression when doubled

VERSATEL® AND VERSATEL ONE
Contact Layer Dressings

RECOMMENDED USES
» To prevent secondary dressing adhesion to the wound

RECOMMENDED SECONDARY DRESSINGS
» Stratasorb® Composite
» Optifoam® Adhesive
» Maxorb® Extra

INDICATIONS
» Dry to heavily draining abrasions
» Partial- and full-thickness wounds
» Venous ulcers or pressure injuries
» Skin tears
» First- and second-degree burns
» Blisters, cuts and lacerations
» Surgical and trauma wounds

CHANGE FREQUENCY
» Versatel may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Third-degree burns
» Individuals with a known sensitivity to silicone
» Not for surgical implantation

Fluid Transferred Through Versatel
Versatel is designed to allow wound fluid to easily transfer into a secondary dressing.¹

ABOUT VERSATEL
» Silicone-based atraumatic adhesive
» Flexible and pliable to conform to body contours and improve comfort
» Versatel One features one-sided silicone contact for easy handling
» Reduces potential trauma from secondary dressing wound adherence
» Minimizes pain during removal
» Channels allow fluid to easily transfer to an absorbent dressing
» Translucent for easy wound visualization

A typical highly exudating wound drains over 10 mL of fluid per day.² In an in vitro study that simulates the drainage of a wound, Versatel was shown to be an efficient transfer layer for fluid. Versatel allowed an average of 16.2 mL of fluid to pass through during 2.5 hours, which is equal to 155.52 mL per day.³

Easy Application Instructions

**Step 1:** Clean and dry wound and periwound area. Remove Versatel from package. Remove liner from one side of the dressing.

**Step 2:** Place dressing directly on wound and smooth into place. NOTE: Versatel can cover periwound skin or may be cut if necessary.

**Step 3:** Remove second liner if applicable (Versatel only). Cover with an appropriate secondary absorbent dressing such as Stratasorb®. Versatel can be used under compression dressings.
**COVER DRESSINGS**

Adhesive Island Wound Dressing

**RECOMMENDED WOUND CONDITIONS**
- All wound depths
- All drainage levels
- Primary dressing
- Secondary dressing

**RECOMMENDED SECONDARY DRESSINGS**
- Not Applicable

**INDICATIONS**
- Pressure injuries
- Partial- and full-thickness wounds
- Incision sites

**CHANGE FREQUENCY**
- Change the dressing as indicated by the amount of drainage or as frequently as the primary dressing indicates
- Can be left in place for up to 7 days

**CONTRAINDICATIONS**
- Third-degree burns
- Patients with a known sensitivity to components of the dressing

**ABOUT COVER DRESSINGS**
- Non-adherent deluxe soaker pad
- Non-woven adhesive border
- Waterproof backing (Stratasorb)
- Water-resistant backing (bordered gauze)
- Ideal for incision sites
ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

### STRATASORB COMPOSITE COVER DRESSING
Waterproof, convenient secondary dressing.

SURESITE®
Transparent Film Dressings

RECOMMENDED WOUND CONDITIONS
» Shallow
» No/minimal drainage
» Primary dressing
» Secondary dressing

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
» Peripheral and central I.V. lines
» Partial-thickness wounds
» Full-thickness wounds (secondary dressing)

» Lacerations and abrasions
» To help prevent skin breakdown caused by friction to epidermis

CHANGE FREQUENCY
» Suresite may be left in place for up to 7 days
» Dressing change frequency will depend on amount of drainage

CONTRAINDICATIONS
» Contraindicated as a primary dressing on wounds with moderate to heavy drainage

ABOUT SURESITE
» Traditional moisture vapor transmission rate (MVTR)
» Conformable
» Does not stick to itself
» Microporous technology
» Permits continuous observation of wound and line sites
» Variety of delivery systems

ORDERING INFORMATION
To order by the box, add “Z” to the end of the item number.
To order by the dressing, add “H” to the end of the item number.

SURESITE WINDOW
An easy-to-use window frame delivery.

**DRESSING FIXATION TAPE**
Non-Woven, Silicone and Zinc Tape

**RECOMMENDED USE**
» Dressing retention

**RECOMMENDED SECONDARY DRESSINGS**
» Not Applicable

**INDICATIONS**
» To secure primary dressings
» To secure gastrostomy tubes and other feeding tubes

**CHANGE FREQUENCY**
» Dressing change frequency will depend on the primary dressing and amount of drainage

**CONTRAINDICATIONS**
» Contraindicated as a primary dressing

**ABOUT TAPE**
» MedFix has a printed s-curve release liner
» MedFix EZ is linerless and perforated
» MedFix tapes are water resistant
» Gentac is transparent
» Gentac uses gentle and repositionable silicone adhesive
» Gentac tape is waterproof
» Pinc Tape is zinc based and adheres well even in moist conditions

**PRODUCT SPOTLIGHT**
Pinc™ Tape
» Pinc Utilizes a zinc oxide adhesive
» Pinc tape is Waterproof
» Pinc tape Adheres well in moist environments

WOUND CLEANSERS

RECOMMENDED USES
» Cleansing all types of wounds

RECOMMENDED SECONDARY DRESSINGS
» Not Applicable

INDICATIONS
To clean a wide variety of wounds including:
» Pressure injuries
» Partial- and full-thickness wounds
» Infected and non-infected wounds

CHANGE FREQUENCY
» With every dressing change

CONTRAINDICATIONS
» Patients with a known sensitivity to ingredients in the wound cleanser

ABOUT WOUND CLEANSERS
» Easy cleansing
» Adjustable trigger, PSI of 8.6 at 3
» Within AHCPR guidelines
» MicroKlenz is antimicrobial
» Prophase contains PHMB as a preservative

PRODUCT SPOTLIGHT
Prophase™ Wound Cleanser
» Contains PHMB as a preservative
» Low pH formulation
» Available in convenient 2-oz. squeeze bottle
**ORDERING INFORMATION**
To order by the bottle, add “H” to the end of the item number.

**NE1®**

**Wound Assessment**

**RECOMMENDED USES**

» Measure and assess all types of wounds

**INDICATIONS**

» Wound assessment to assist with wound evaluation

**CHANGE FREQUENCY**

» One time use, during each wound evaluation

» Upon admission and discharge at minimum

**CONTRAINDICATIONS**

» None

**ABOUT NE1**

» Easy-to-use color-matching technique

» Reduces errors and promotes accurate wound assessment

» Standardizes wound documentation

» Free online education

---

The study showed a statistically significant improvement in wound assessment. Overall, the clinicians more than doubled their accuracy with the help of the NE1 Wound Assessment Tool.¹

THERAPEUTIC SUPPORT SURFACES

RECOMMENDED USES
» Pressure redistribution
» Friction reduction
» Shear reduction
» Heat distribution

ABOUT THERAPEUTIC SUPPORT SURFACES
» To provide solutions for the entire continuum of care, Medline offers a full line of pressure redistribution products for acute, long-term, and home care use.

ACUTE CARE
For more Information, see our Acute Care Support Surfaces Brochure (LIT58R)

THERATECH MATTRESS Prevention through Treatment of Stage 2 Wounds
Resilient load-bearing cells independently conform to the body to redistribute pressure and reduce shear, while air channels reduce heat and moisture.

EQUALIZAIRE MATTRESS Prevention through Treatment of Stage 4 Wounds
The dynamic, self-adjusting non-powered mattress can become an alternating pressure mattress with the addition of the optional pump.

ADVANTAGE O.R. TABLE Prevention through Treatment of Stage 2 Wounds
Advanced surfaces optimize pressure redistribution during surgery on the O.R. table.

STRETCHER PADS Prevention through Treatment of Stage 2 Wounds
Advanced surfaces optimize pressure redistribution during transportation to and from the operating room.

HEEL PROTECTION For Prevention through Treatment of Stage 4 Wounds
Innovative devices elevate the heels and significantly reduce pressure, friction and shear.
LONG-TERM CARE
For more information, see our Long-Term Care Support Surfaces Brochure (LIT162)

ADVANTAGE CONTOUR MATTRESSES
Prevention through Treatment of Stage 2 Wounds
The unique contour shape of the high-resiliency foam helps it to completely conform to the resident’s body and cradle high-risk areas.

POWERED MATTRESSES/OVERLAYS
Prevention through Treatment of Stage 2 Wounds
Choose from a wide variety of options for every major therapeutic modality, including alternating pressure, low air loss, true low air loss and self-adjusting therapies.

WHEELCHAIR CUSHIONS
Prevention through Treatment of Stage 4 Wounds
From Medline brand to popular name brands, we offer a wide variety of cushions designed to meet specific needs of today’s residents.

HEEL PROTECTION DEVICES
Prevention through Treatment of Stage 4 Wounds
Medline’s top-quality heel protection devices elevate heels and significantly reduce pressure, friction, and shear.

HME DEALER
For more information, see our HME Dealer Support Surfaces Brochure (LIT459)

GROUP 1 TREATMENT PRODUCTS
Prevention through Treatment of Stage 2 Wounds
A variety of prevention products are specifically tailored to HME Dealers, including static air overlays, alternating-pressure overlays, gel overlays and therapeutic homecare mattresses.

GROUP 2 TREATMENT PRODUCTS
Treatment of Stages 2 through 4 & Surgical Wounds
A variety of treatment options cater to HME Dealers, including alternating pressure, low air loss, true low air loss and self-adjusting therapies.

WHEELCHAIR CUSHIONS/BEDSIDE SAFETY/ACCESSORIES
Prevention through Treatment of Stage 4 Wounds
A wide selection of Medline-brand and popular name-brand cushions are specifically designed to meet the needs of today’s HME Dealer.
Classification of Tissue Destruction in Pressure Injury

A pressure injury is localized damage to the skin and/or underlying soft tissue usually over a bony prominence or related to a medical or other device. The injury can present as intact skin or an open ulcer and may be painful. The injury occurs as a result of intense and/or prolonged pressure or pressure in combination with shear. The tolerance of soft tissue for pressure and shear may also be affected by microclimate, nutrition, perfusion, co-morbidities and condition of the soft tissue. NPUAP, 2016

**STAGE 1**

Stage 1 Pressure Injury: Non-blanchable erythema of intact skin  
Intact skin with a localized area of non-blanchable erythema, which may appear differently in darkly pigmented skin.

Presence of blanchable erythema or changes in sensation, temperature, or firmness may precede visual changes. Color changes do not include purple or maroon discoloration; these may indicate deep tissue pressure injury.

**STAGE 2**

Stage 2 Pressure Injury: Partial-thickness skin loss with exposed dermis  
The wound bed is viable, pink or red, moist, and may also present as an intact or ruptured serum-filled blister. Adipose (fat) is not visible and deeper tissues are not visible. Granulation tissue, slough and eschar are not present.

These injuries commonly result from adverse microclimate and shear in the skin over the pelvis and shear in the heel. This stage should not be used to describe moisture associated skin damage (MASD) including incontinence associated dermatitis (IAD), intertriginous dermatitis (ITD), medical adhesive related skin injury (MARSII), or traumatic wounds (skin tears, burns, abrasions).

**STAGE 3**

Stage 3 Pressure Injury: Full-thickness skin loss  
Full-thickness loss of skin, in which adipose (fat) is visible in the ulcer and granulation tissue and epibole (rolled wound edges) are often present. Slough and/or eschar may be visible. The depth of tissue damage varies by anatomical location; areas of significant adiposity can develop deep wounds. Undermining and tunneling may occur. Fascia, muscle, tendon, ligament, cartilage and/or bone are not exposed. If slough or eschar obscures the extent of tissue loss this is an Unstageable Pressure Injury.

**STAGE 4**

Stage 4 Pressure Injury: Full-thickness skin and tissue loss  
Full-thickness skin and tissue loss with exposed or directly palpable fascia, muscle, tendon, ligament, cartilage or bone in the ulcer.

Slough and/or eschar may be visible. Epibole (rolled edges), undermining and/or tunneling often occur. Depth varies by anatomical location. If slough or eschar obscures the extent of tissue loss this is an Unstageable Pressure Injury.

**DEEP TISSUE PRESSURE INJURY (DTPI)**

Deep Tissue Pressure Injury: Persistent non-blanchable deep red, maroon or purple discoloration  
Intact or non-intact skin with localized area of persistent non-blanchable deep red, maroon, purple discoloration or epidermal separation revealing a dark wound bed or blood-filled blister. Pain and temperature change often precede skin color changes. Discoloration may appear differently in darkly pigmented skin. This injury results from intense and/or prolonged pressure and shear forces at the bone-muscle interface. The wound may evolve rapidly to reveal the actual extent of tissue injury, or may resolve without tissue loss. If necrotic tissue, subcutaneous tissue, granulation tissue, fascia, muscle or other underlying structures are visible, this indicates a full-thickness pressure injury (Unstageable, Stage 3 or Stage 4). Do not use DTPI to describe vascular, traumatic, neuropathic, or dermatologic conditions.

**UNSTAGEABLE**

Unstageable Pressure Injury: Obscured full-thickness skin and tissue loss  
Full-thickness skin and tissue loss in which the extent of tissue damage within the ulcer cannot be confirmed because it is obscured by slough or eschar. If slough or eschar is removed, a Stage 3 or Stage 4 pressure injury will be revealed. Stable eschar (i.e. dry, adherent, intact without erythema or fluctuance) on an ischemic limb or the heel(s) should not be removed.
EDUCARE® HOTLINE MANAGED BY WOUND CARE NURSE SPECIALIST

An important number to remember is 1-888-701-SKIN (7546) because it reaches our Educare Hotlines managed by board-certified wound care nurses. The nurses are available to answer questions about product usage such as application and appropriateness of a dressing for a particular wound condition. The Educare Hotline is staffed Monday through Friday from 8 am to 5 pm Central Time.

PRODUCT SUPPORT AT www.medline.com/advancedwoundcare

Medline’s website is another way to get up-to-date product information. You will find the latest brochures as well as application videos online at www.medline.com/advancedwoundcare. The interactive product selector can also help you choose the best product based upon the wound conditions.

MORE THAN 80 WOUND AND SKIN CARE PRODUCT SPECIALISTS

Receiving support from one of Medline’s 80+ wound care product specialists has never been easier. The wound care product specialists are devoted to supplying you with appropriate wound care products, services and educational support. This team is highly trained and available to deliver on-site, face-to-face in-servicing for your staff.

For more information, see www.medline.com/advancedwoundcare or contact your sales specialist.
Many nurses find themselves in situations on a daily basis where valuable time is wasted searching for the right dressing. Often the wrong dressing is used or the dressing is not used properly. By listening to you, Medline has found a way to improve this process and ensure that nurses have the information they need. It is called Educational Packaging. The package focuses on patient safety and correct product application. Each package serves as a 2-Minute Course on Wound Care™.

Often, a dressing’s box and product insert never leaves a supply room or closet. For that reason, Medline leverages Educational Packaging to provide bedside support to the nurse, the patient, and the family.

Education is essential for clinicians as well as for their patients and their families. Ensuring that patients and caregivers are taught the expected outcomes and the plan to achieve them is vital for successful wound treatment.
MEDLINE UNIVERSITY®
Medline University offers continuing education programs and accredited continuing nursing education opportunities. We offer a wide array of educational opportunities on topics that are current and relevant to your staff. The courses are presented in an online format so you can take them at your convenience. All you need is a connection to the internet! The course content, test and CE certificate are online. Visit our Web site www.medlineuniversity.com for more information.

ONLINE EDUCATION

» Free access to 250 clinical courses approved for continuing education credit by nationally recognized boards of nursing
» Keep track of all your Medline University CEs and other CEs in one convenient place
» Easy-to-use website, with no app required

And it’s all absolutely FREE!

WOUNDROUNDS®

A powerful system that transforms wound care management across the continuum of care.

WoundRounds integrates handheld technology with Web-based tools for documenting wounds, tracking outcomes and helping caregivers to maintain patients’ skin integrity.

ABOUT WOUNDROUNDS®

A point-of-care solution, WoundRounds combines the convenience of a handheld device with the efficiency of a Web-based application, where data can be stored and analyzed in a single system. With WoundRounds, you can enable your staff to improve patient care, save on costs by moving to digital data collection and storage, and quickly generate improvement reports.

HOW DOES IT WORK?

STEP 1:
At the patient’s bedside, WoundRounds makes it easy to collect data on the patient’s wound.
» Take photos
» Follow step-by-step prompts through patient assessment
» Document treatment recommendations/utilization

STEP 2:
Data collected with the handheld device is uploaded to secure servers. Once uploaded:
» Reports can be generated automatically
» No searching for paper charting
» No incomplete or missing documentation

Nurses enter data once, and it’s done!

Contact your Medline representative to request a demonstration of WoundRounds today!

Touchscreen—
As easy to use as a smart phone, and just as portable

Built-in camera—
Capturing wound images for reference and documentation

Transmitting vital information and images—
To secure servers for easy storage and retrieval

Evidence-based prompts—
Guiding nurses, step by step, through assessments and treatments

DRIVEN TO HEAL.

Effectively managing chronic wounds requires you to look at things differently and challenge the status quo. Medline’s mission is to help you rise to the challenge by offering the broadest range of advanced wound care products in the industry and delivering a comprehensive package of educational resources. This approach ensures your facility has the tools and expertise to tackle difficult-to-heal chronic wounds.

Seeing Things Differently
Medline has a long history of rapid innovation in wound care with no intention of slowing down. The challenges you face in managing chronic wounds drive us to develop new solutions, positively affecting the quality and efficiency of care.

Medline’s Latest Innovations
- Hyalomatrix® hyaluronic acid based wound device
- TheraHoney® honey wound dressings
- Opticell® with Chytoform technology
- Optifoam® Gentle superabsorbent foam with silicone face and border
