Steriset® Sterilization Containers
Innovative, reusable container technology

Sterilize, store, repeat
Human-proof and hygienic, time after time

Sterilization container systems come with two significant risk factors—human error and hygienic security. Our easy-to-use Steriset® sterilization containers eliminate both. Its unique container technology makes it the only 100% reusable container on the market, and its **filter-free, auto-locking design** helps eliminate the potential for human error that can compromise the sterility of your instruments. Plus, each Steriset container has an **average lifespan of 10-12 years**, providing long-term, eco-friendly cost savings.

**More efficient**
- Less time prepping containers
- No need to monitor shelf life
- No need to track inventory

**More hygienic**
- No risk of forgetting to insert filters
- No risk of holes or tears leading to contamination
- No risk of disposable locks breaking the sterile field

**More savings**
- Eliminates disposable, single-use product waste
- Steriset’s closed design eliminates the need for transport containers

**Invest today, save for a decade**
Depending on your unique facility and the products you’re converting from, the ROI on Steriset containers can be significant.
Innovation designed to last

Double-lid protection

Stainless steel valve

Tamper-proof security

Condensation drain
**Double lid for extra security and protection**

Double lid design allows steam to enter the container from the side—while protecting the inner valve plate and contents from damage and contamination.

- Durable aluminum body protects valuable instruments and the inner valve
- Protects inner valve from damage
- Keeps out dust, excess moisture and other contaminants for added hygienic security

**Stainless steel valve ensures sterility and reduces waste**

The pressure-activated, stainless steel valve is part of our double-lid design and forms an effective barrier to microorganisms during transport and storage.

- Eliminates the need for disposable paper filters
- Pressure-activated to open automatically during the steam pre-vacuum sterilization cycle
- Valve remains closed after sterilization for an impermeable barrier that keeps contents sterile

**How it works**

- During the sterilization cycle, pressure injection opens the valve—allowing steam to enter the container and sterilize its contents.
- During the vacuum cycle, vacuum draw opens the valve—allowing steam to escape the container, drying the inside.
Condensation drain for heavy loads

Heat-activated condensation drains are an optional feature on select container sizes.

- Ideal for sets over 18 pounds, which are more likely to retain moisture
- Opens when sterilizer reaches 260°, allowing any remaining condensation to flow out of the container
- When sterilizer cools to 210°, the drain closes—ensuring a dry, fully protected instrument load

ThermoLoc® locks in sterility

Activating at approximately 200°, the red indicator bar locks the closed container latch during sterilization.

- Heat-activated ThermoLoc® Intelligent Locking System locks lid in place during sterilization cycle
- Ensures container remains sealed until opened in the OR
- Eliminates the need for disposable plastic locks
- Provides a tamper-proof seal

How it works

Condensed water collects around the drain—which remains closed.

Drain opens when sterilizer reaches 260°, allowing up to 70% of condensed water to drain.

ThermoLoc® before sterilization

ThermoLoc® after sterilization
## Sizes for every set

Sustainability
Steriset® Sterilization Containers are part of our greensmart® sustainability program. All greensmart products go through a rigorous verification process, covering product lifecycle and sourcing through disposal.

- Our unique, stainless steel valve design negates the need for disposable filters
- ThermoLoc® Intelligent Locking System eliminates the use of disposable, plastic locks
- Average life of 12 years
- May reduce disposable wrap usage by up to 80%

Warranty and container repair
You’re set for life. We offer a lifetime warranty on these three patented features:

- Reusable valve
- ThermoLocs
- Condensation drain

These components will be repaired or replaced at no charge if they malfunction due to normal use.

Two routes for repair:
1. Send Steriset to our repair department.
2. Use onsite repair service.

Medline University
Whether your team members are looking to expand their skills or satisfy annual CE requirements, we have more than 20 online courses available, including:

- Roles and Responsibilities of Technicians
- Are Your Items Sterile?
- Best Practices for High Level Disinfection

Request a quote today. Contact your Medline Representative for more details about our Steriset container line.
